

Cover Letter

Dear Hiring Team,

I am excited to apply for the Staff Product Designer Contractor position at DigiCert. With more than 15 years of experience spanning UX, interaction design, product design and design systems, I have built my career around helping teams simplify complex problems into intuitive, scalable digital experiences. My background includes SaaS, financial services, telecommunications, e-learning and mobile products, working closely with product owners, engineers, stakeholders and leadership teams to deliver user-centred solutions from discovery through implementation.

Throughout my career I have led UX initiatives, mentored designers, contributed to design systems and collaborated across multidisciplinary teams to align business objectives, technical requirements and user needs. I am particularly drawn to complex platforms and interconnected systems where thoughtful design can reduce friction, improve usability and create meaningful value for users.

More recently, my focus has evolved toward the convergence of AI-assisted workflows, design systems and scalable interaction design. I am actively exploring how emerging tools, agentic workflows and design-to-development processes can help create stronger connections between strategy, design and implementation while maintaining a rigorous user-centred approach.

What excites me most about DigiCert is the opportunity to work on foundational platform experiences within a highly technical domain where systems thinking, collaboration and exceptional user experience design are essential. The challenge of transforming complex technical concepts into intuitive, scalable experiences is exactly the kind of work I find most rewarding.

I would welcome the opportunity to discuss how my experience, systems-thinking approach and passion for evolving product design practices could contribute to DigiCert's continued success.

Kind regards,
Paul Bristow
