Tutorial

Tutorial screens

The tutorial screen is the first thing the user sees when loading up the app for the first time. The user will get 5 screens they can scroll through explaining the most common tasks they would perform in the app. The user is presented with Login and Signup buttons – Signup for new users, Login for existing users.. Once the user has signed up, future visits on the app; they will be taken to the login page.

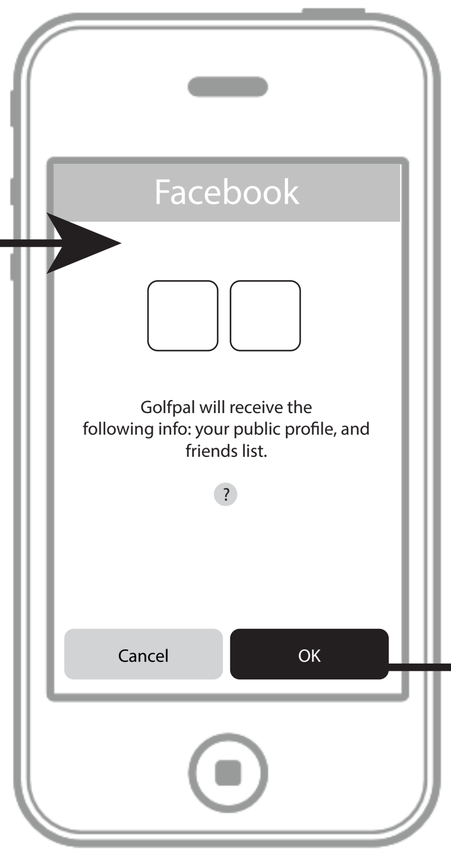

Sign up / first time user sign up.

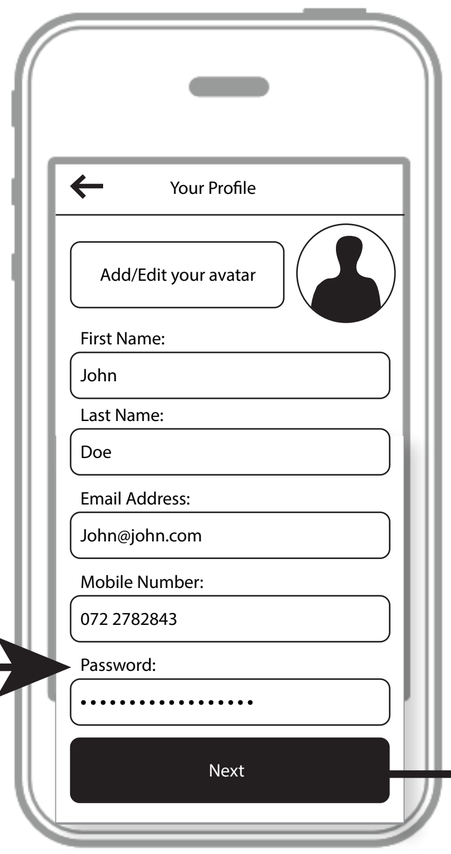

Tutorial screen
The user launches the app for the first time. Watches the tutorial and is keen to Signup. The user taps the Signup button.

The user selects to sign up with Facebook

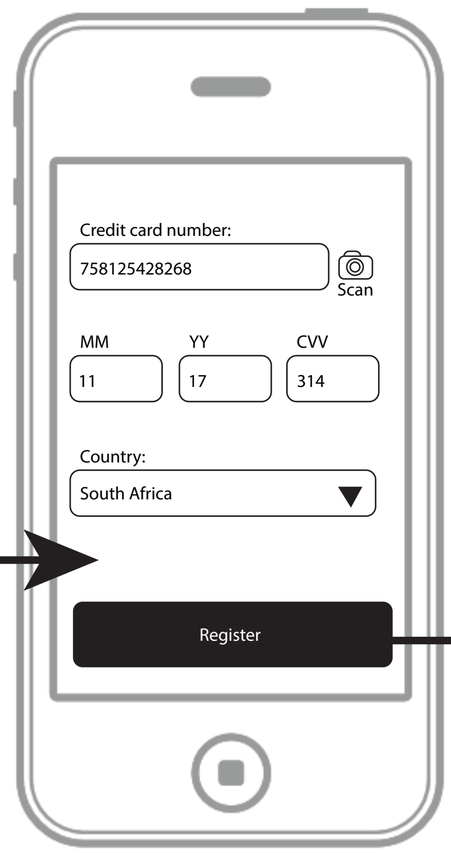

The Facebook signin explains the permissions needed by Golfpal, and the user taps ok.

The users personal details are pulled through from Facebook, and the Avatar, First name, Last name, email address, and mobile number fields are populated if these details are on the users social media profile.

The user enters a password, and click next.

The user can manually enter their credit card details or can use the scan button to scan the details of their card.

Profile page

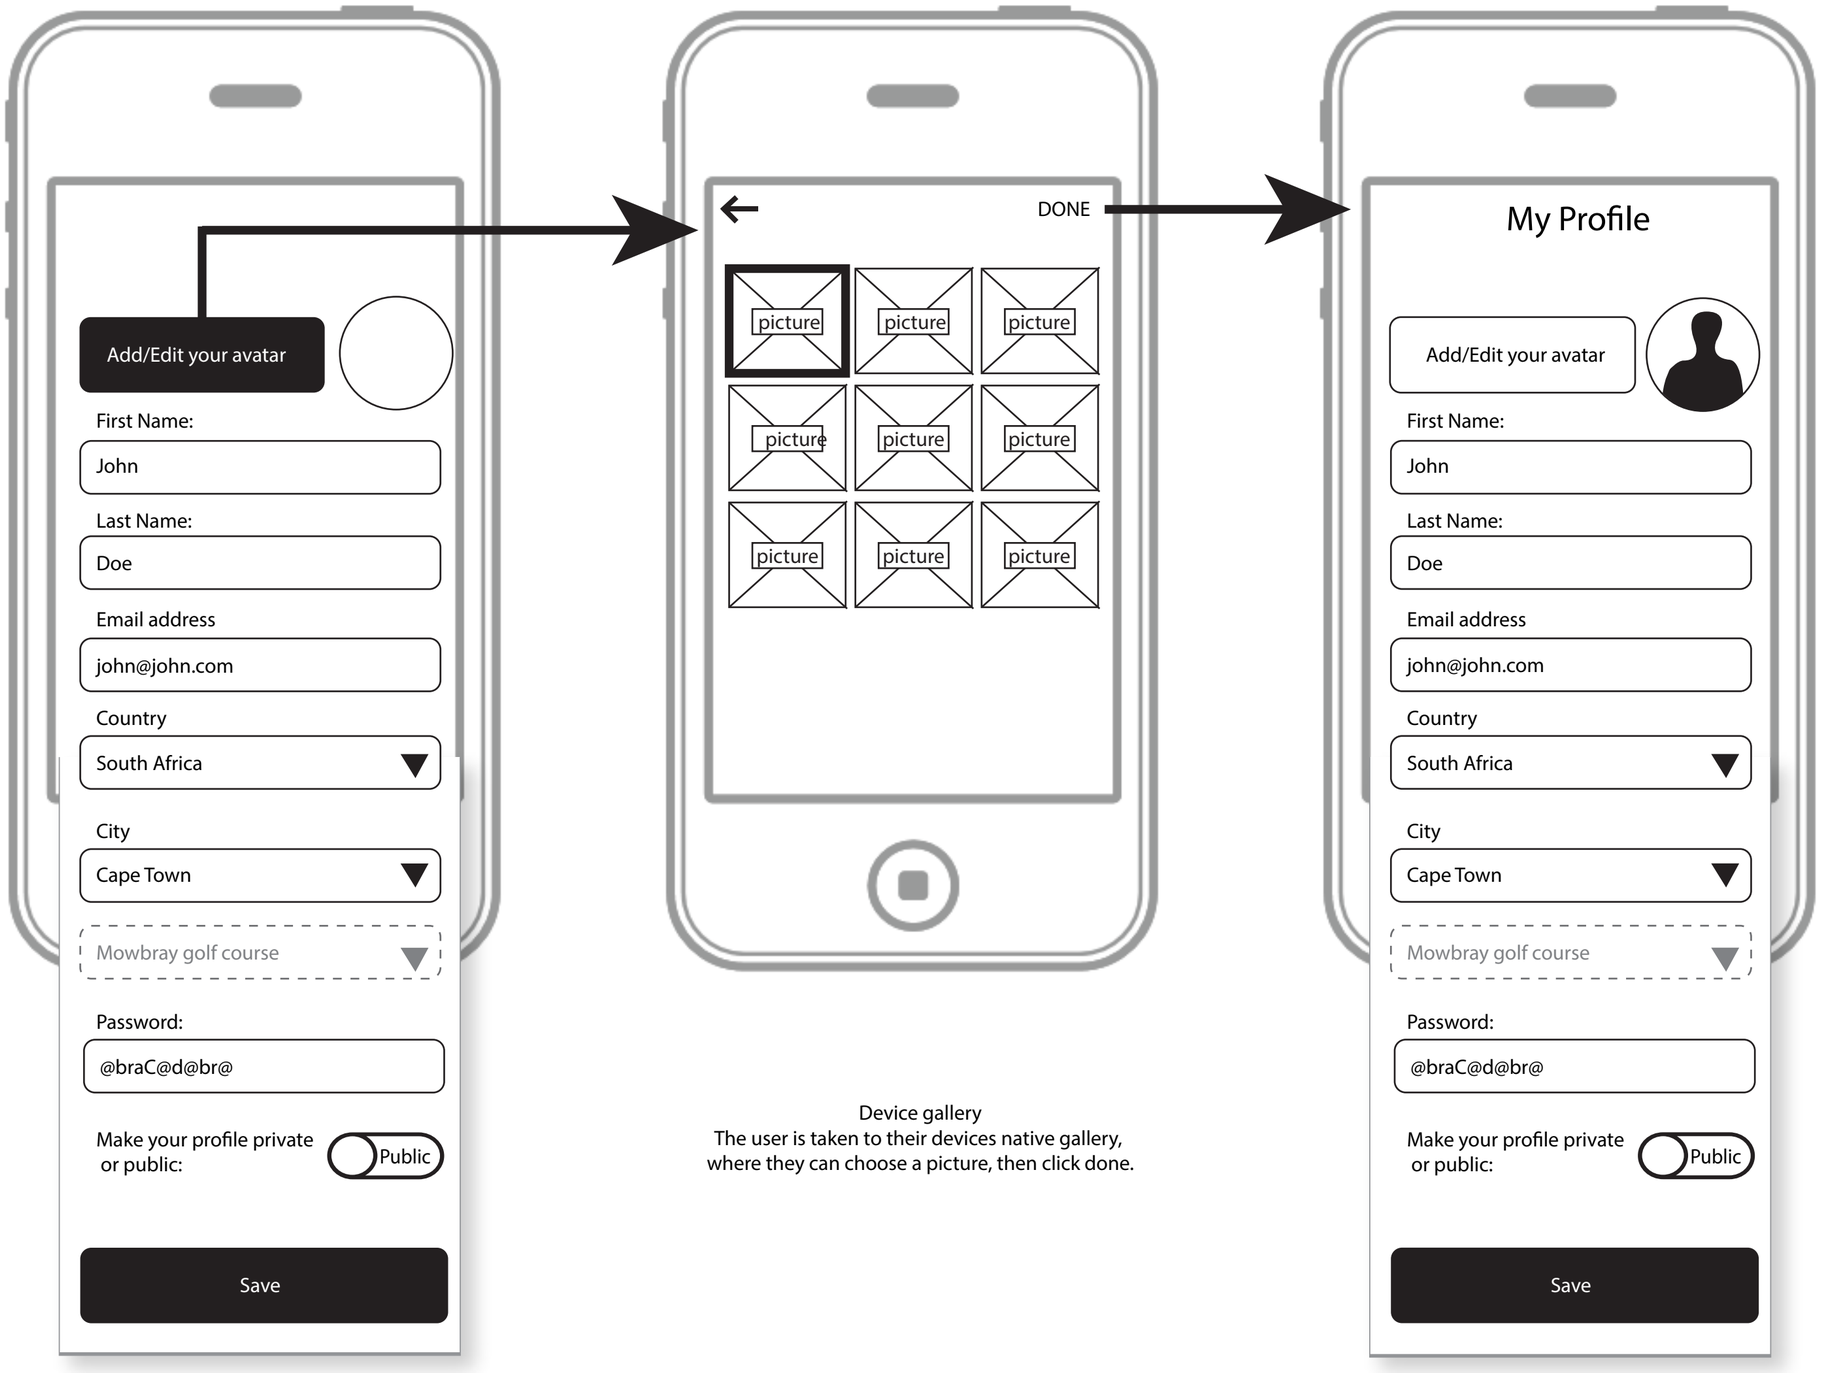

The user is directed to the Profile page and prompted to fill out their profile via a toast notification.
All information that was previously captured, is prepopulated in the form. The user can update/correct this information at this point, if need be.

Note the user has the ability to make thier Profile Private. The default setting though is Public

The user is prompted to invite all contacts from their mobile contact list, or select individuals from thier contact list.

Add / Edit your Avatar journey

Profile
User is now logged in and prompted via a toast notification to fill out his profile. The user decides to change /edit his profile pic, so taps the "Edit you Avatar" Button.

Device gallery
The user is taken to their devices native gallery, where they can choose a picture, then click done.

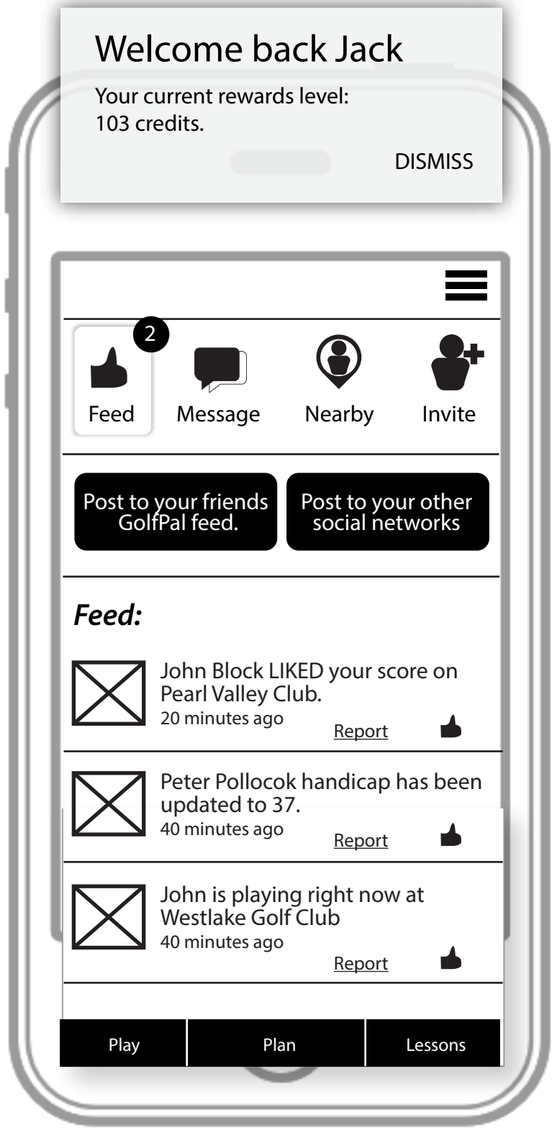

Profile
The users Avatar has now been updated.

Welcome to Golfpal and welcome back screens / home landing page

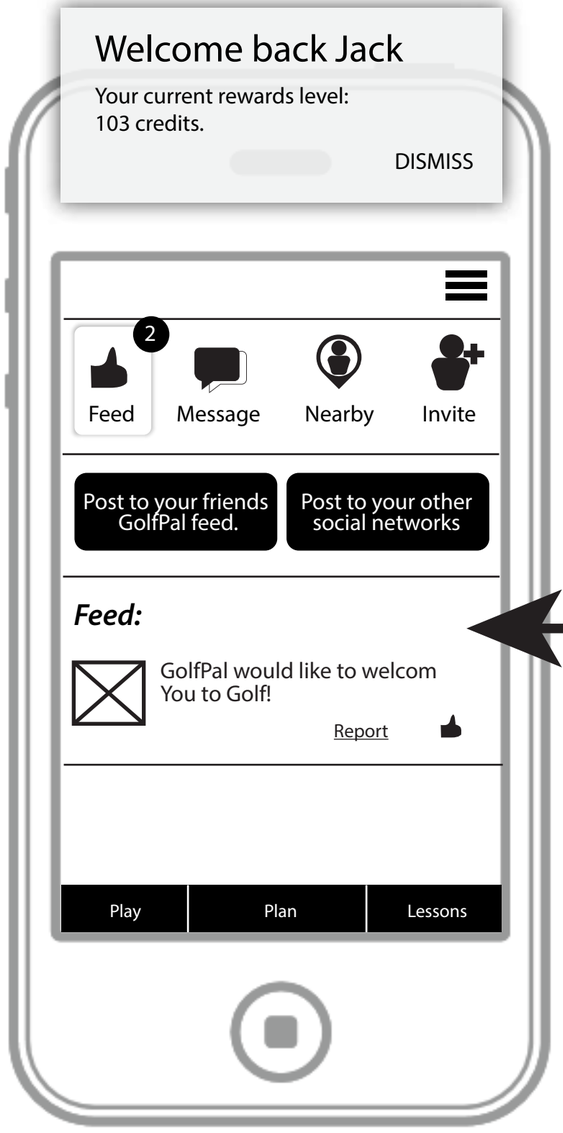

Featured Pros

First time users get this Welcome message, via toast notification. Here the user will be prompted to either Invite all contacts from your mobile contacts list, or select individual/s via a toggle from your mobile contact list.

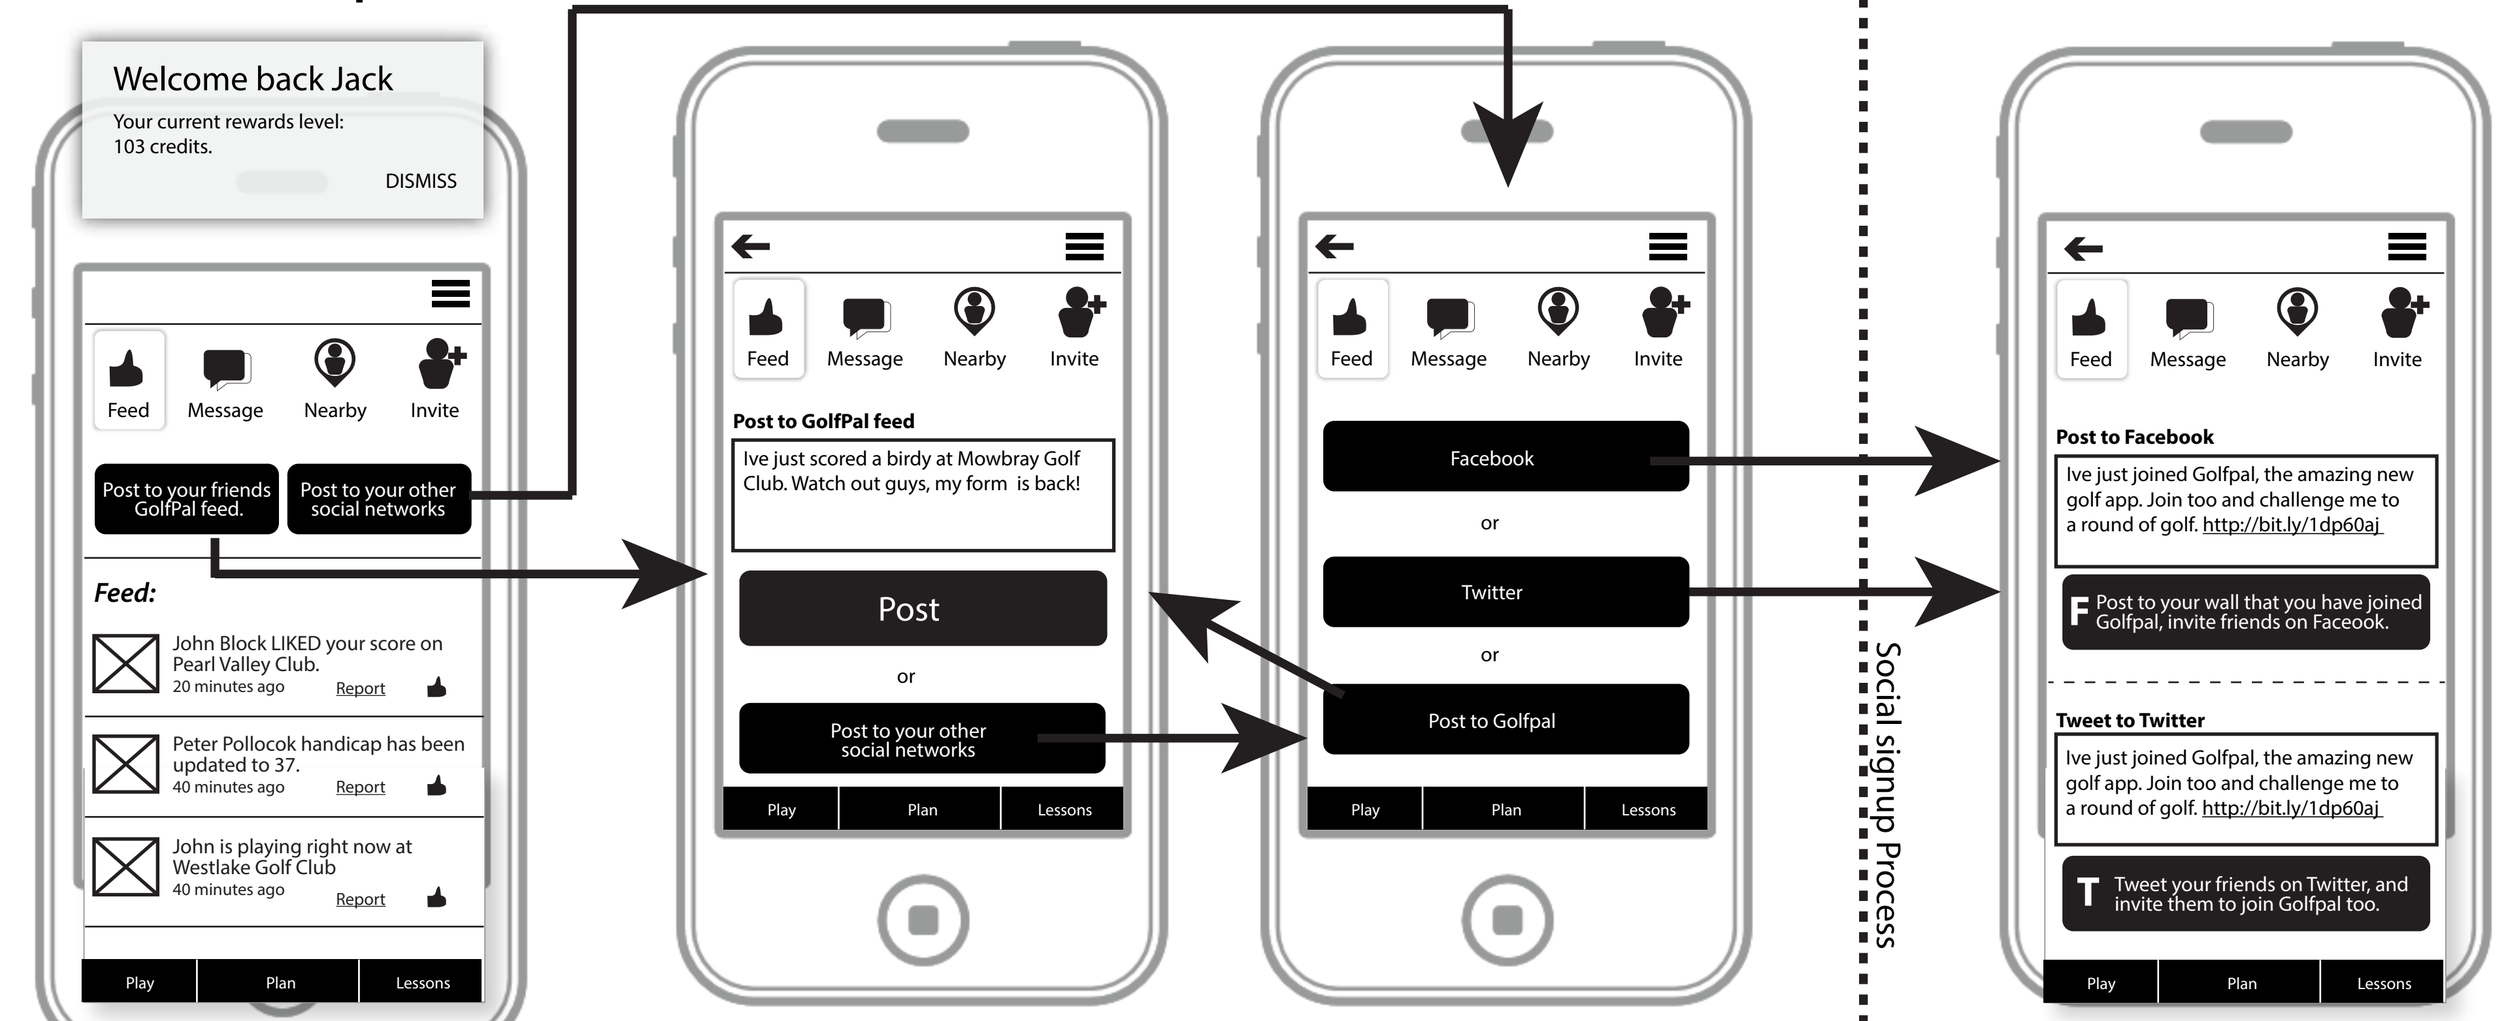

Existing users will get the "Welcome back" toast notification, and land on the feed screen.

First time users should get a notification on their feed from Golfpal welocming them.

Post to Golfpal feed and Post to Social Networks

The user is given the options to either post to their Golfpal feed or to their Facebook and or Twitter feeds. (note there will be a step in between doing a social sign on if they choose to post to other networks like Facebook or Twitter.

On the Post to Golfpal feed screen, the user can type in a message and post it to their friends feeds, or can choose to post to other social networks.

The user is presented a choice of various social networks, they can choose from (business rule).

If the user selects eg: Twitter or Facebook, they will go through a social signup then be taken to a screen where they can post their message.

Depending on the Social network the user selected will determine if for example in this screen tweet to Twitter, or post to Facebook appears.

Once the tweet button or post to Facebook button is selected, the message is post to said network, and the user is returned to the GolfPal feed screen.

Home screen, Feed, Message, Nearby and Invite

Feed screen

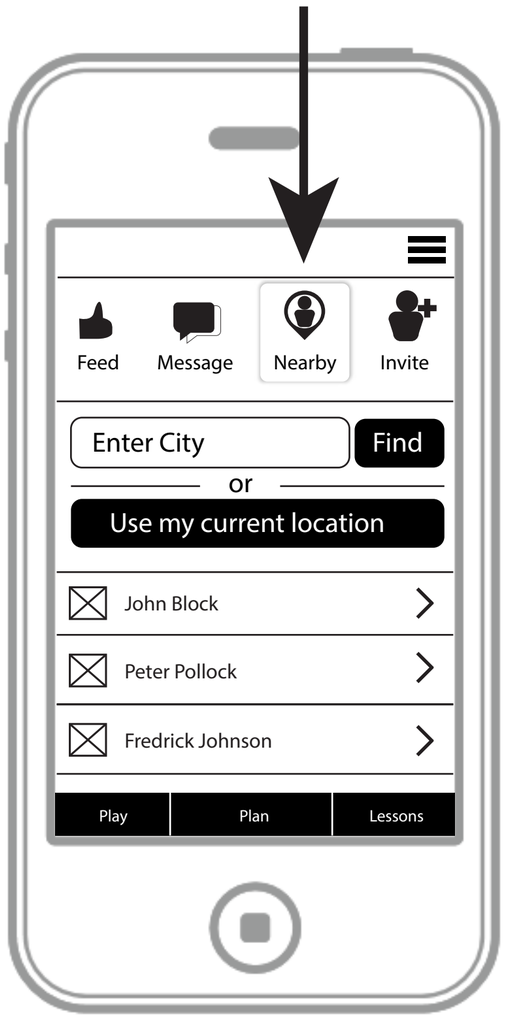

The users feed is populated with feeds from the users GolfPal network. The user can like a post on their feed, which notifies the poster via a notification icon on the their feed button.

The user has the ability to Report a post. Reporting a post will notify a systems admin, who will determine if the post violates the terms and conditions and can decide to remove the post, and possibly ban the user from the app.

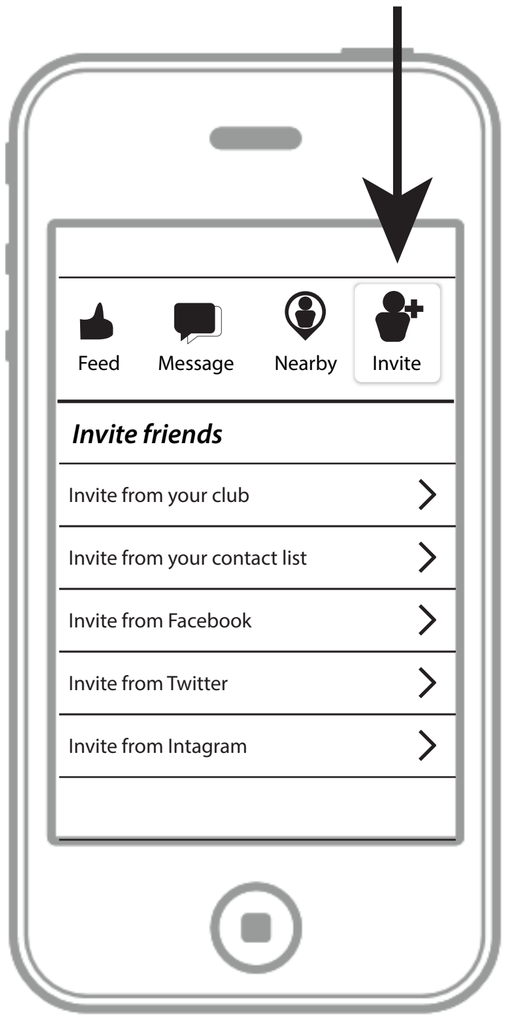

Home Messages

The user has the ability to tap on messages, to open them, and reply. The user can also compose messages by tapping the pen icon.

Home Nearby

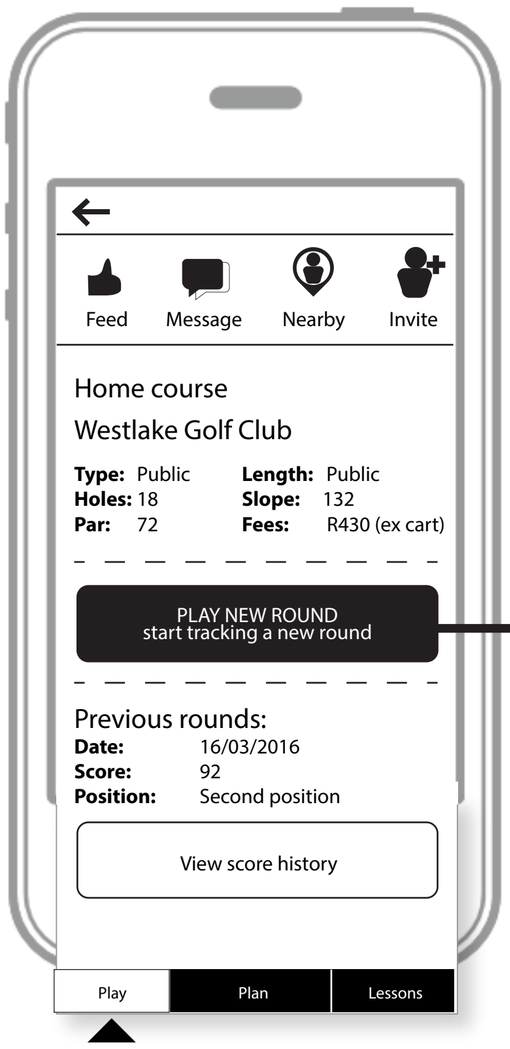

The user can find other GolfPal users either in another city, or use their current location to search. The app will bring up a list of users in the selected vicinity. The user can select said users and "Friend Request" them. This adds them to the users GolfPal contacts, and allows the user to see thier feed, and visa versa.

Home Invite

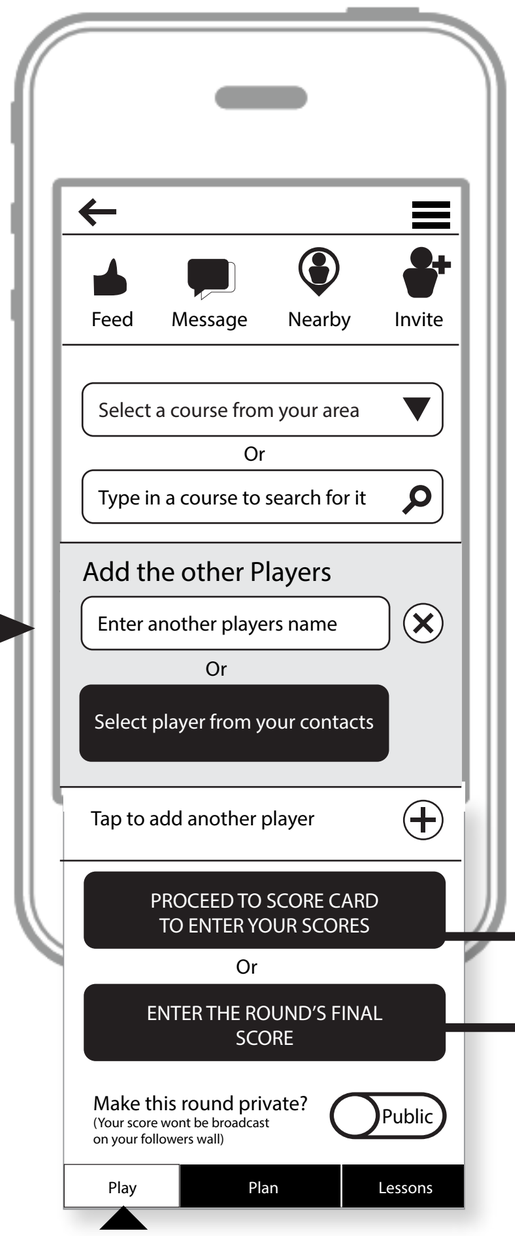

This feature allows an existing GolfPal user to invite users to join GolfPal, from their devices contact list, from thier Facebook friends, their twitter and Instagram contacts and invite them to GolfPal.

Play screen - Play/track new round

The user has selected the play button at the bottom of the screen. The user is presented with the ability to either Play a new round, and track it.

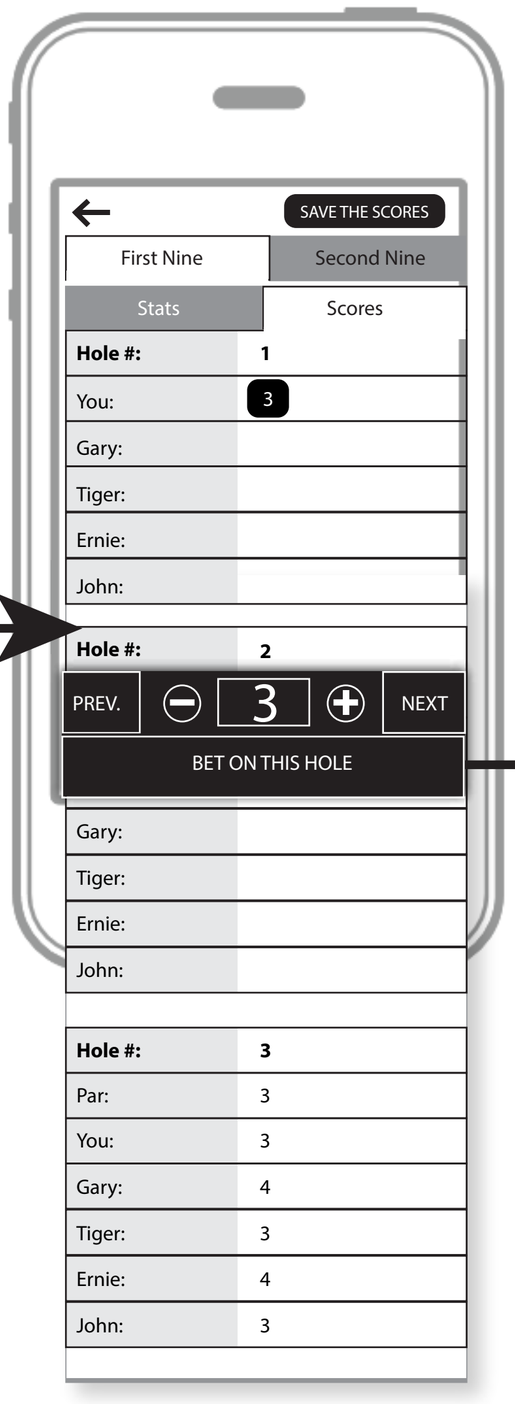

Or the user can view their score history in this scenario, the user chooses to view their score history from past rounds.

Play new round (course and player details)

The user can either select one of the golf clubs they have played at before, (Note your courses stored in "my locations" will appear in the dropdown, for easy selection. Or uses can search for a golf club by name. After that, the user needs to add the other players names for the score card

The user can either "Proceed to Score card to enter your scores" , or just enter the completed round score.

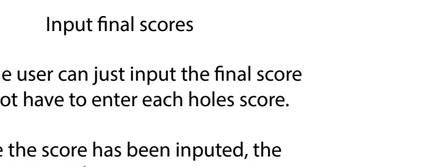

The user can now choose if he is playing the front or the back 9 This table layout has changed from last wireframe to Accommodate a portrait view.

The control to the left is to input scores easily. It will be fixed to the bottom of your screen.

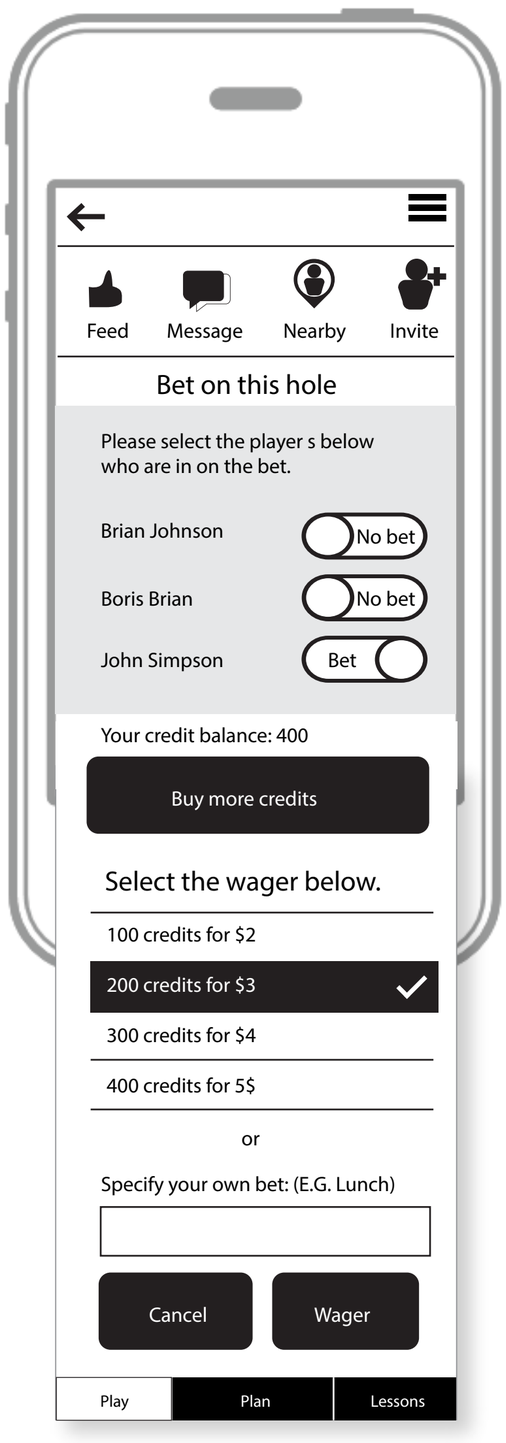

The + and - increase or decrease the score.

Next and Previous buttons move the selection highlight up and down the table - Allowing you to easily input scores.

This user decides to do a bet on the third hole with his mates he selected for this score card.

The user selects the bet on this hole button.

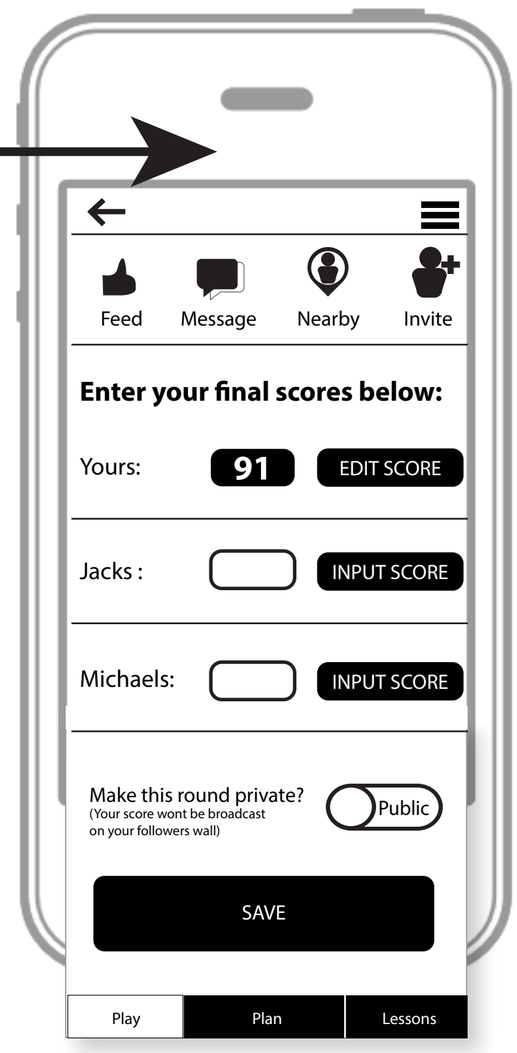

The user selects to bet John Simpson, for 200 credits for $3.

The user can see their credit balance, and can buy more credit if need be.

They can also specify a specific amount to bet. On hitting Wager, a push notification confirming the bet will be sent to the selected users.

Note you can only bet per hole to players you have added to your score card.

!! Note the buisness logic needs to be thought about if the chosen players are not users / members of Golfpal. Also, im not convinced that a user will use this feature as opposed to betting with players in real life (not virtually) as winners of bets usually like to watch the humiliation of the loser handing over the cash. IMHO.

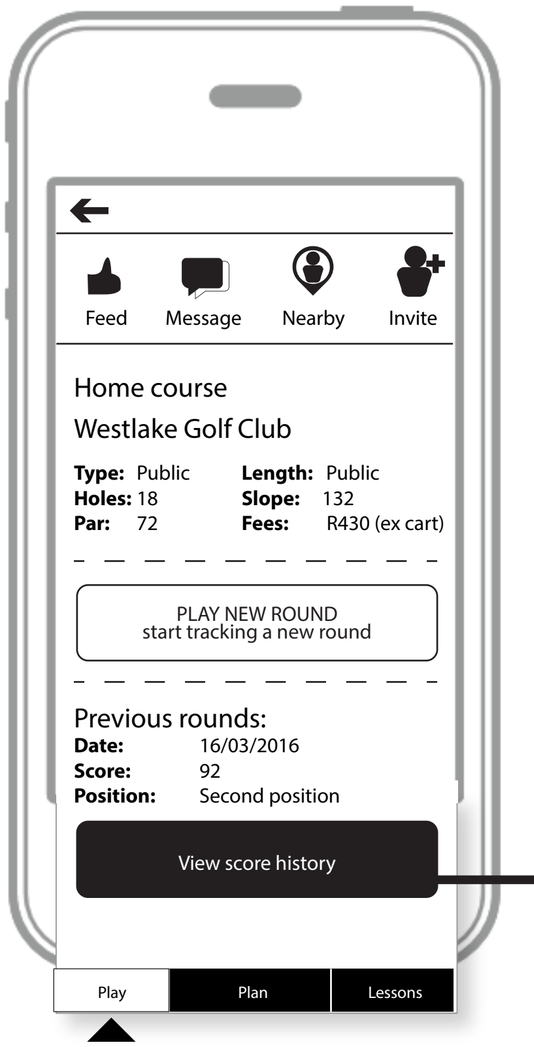

Input final scores

Here the user can just input the final score and not have to enter each holes score.

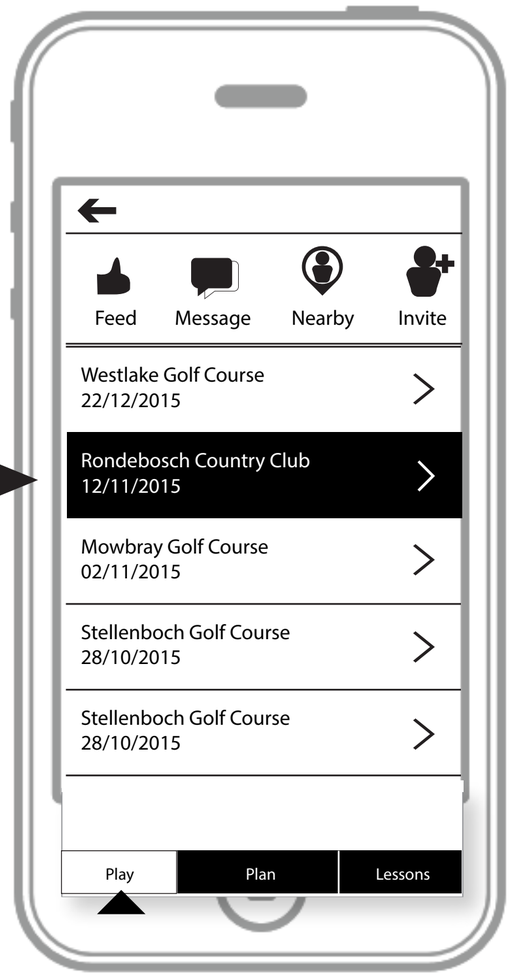

Once the score has been inputed, the "INPUT SCORE" button turns into a "EDIT SCORE" button, to allow the user to change this. Once the scores have been imputed the user can save and share or choose to keep it private.

Play screen - View score history

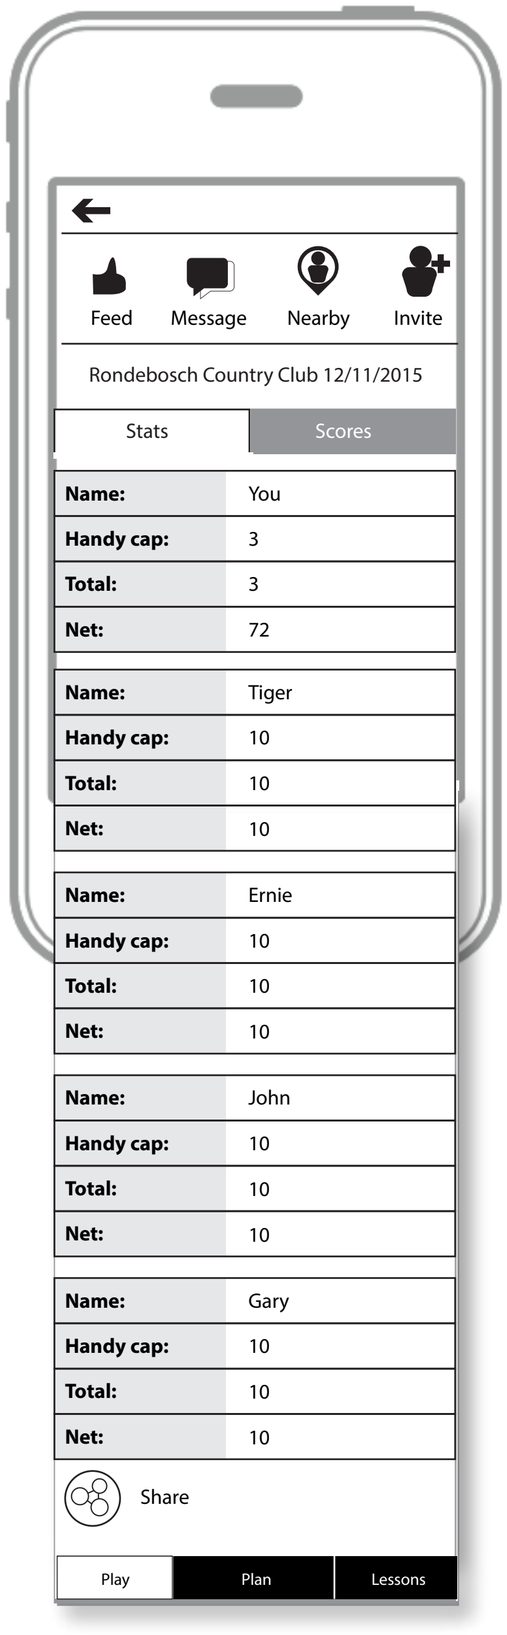

The user has selected the play button at the bottom of the screen. The user is presented with the ability to either Play a new round, and track it.

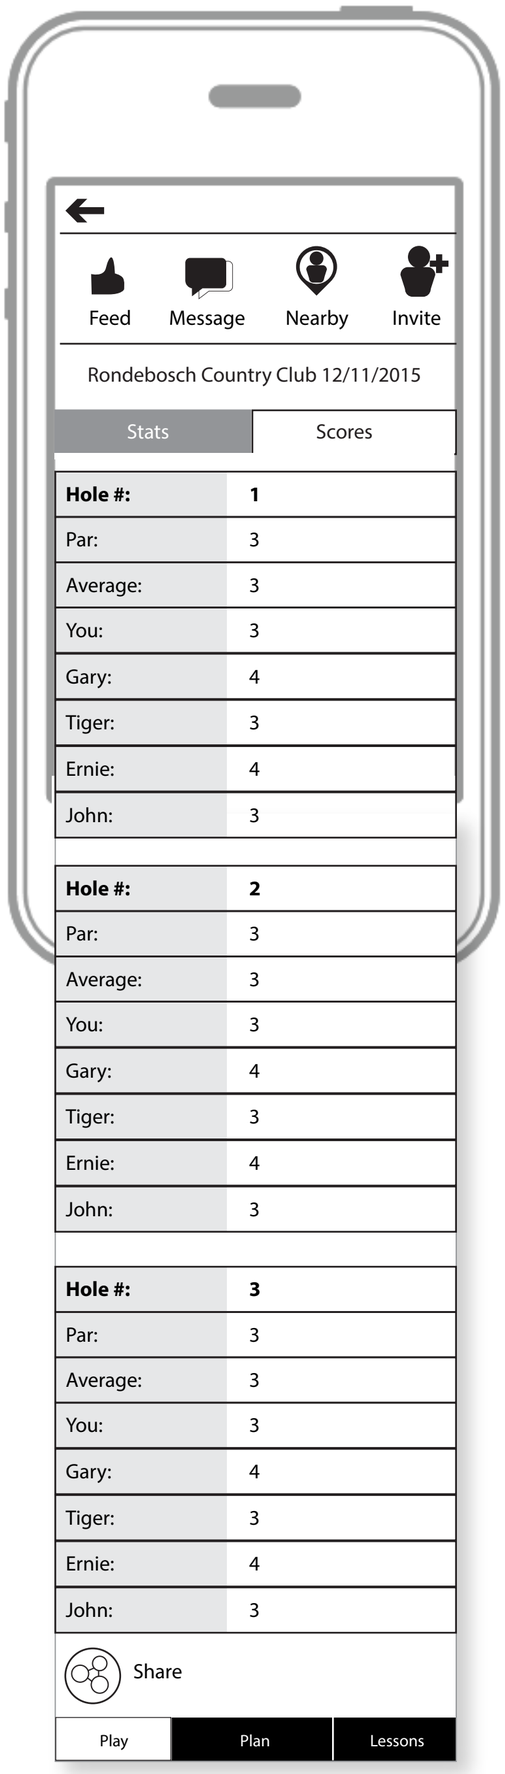

Or the user can view their score history
in this scenario, the user chooses to
view their score history from past rounds.

The user sees a list of previous rounds played, and selects one to see the details about the played round.

The use can view their **Stats** for the selected round of golf, and share them to their friends Golfpal feeds, or their Facebook and Instagram wall.

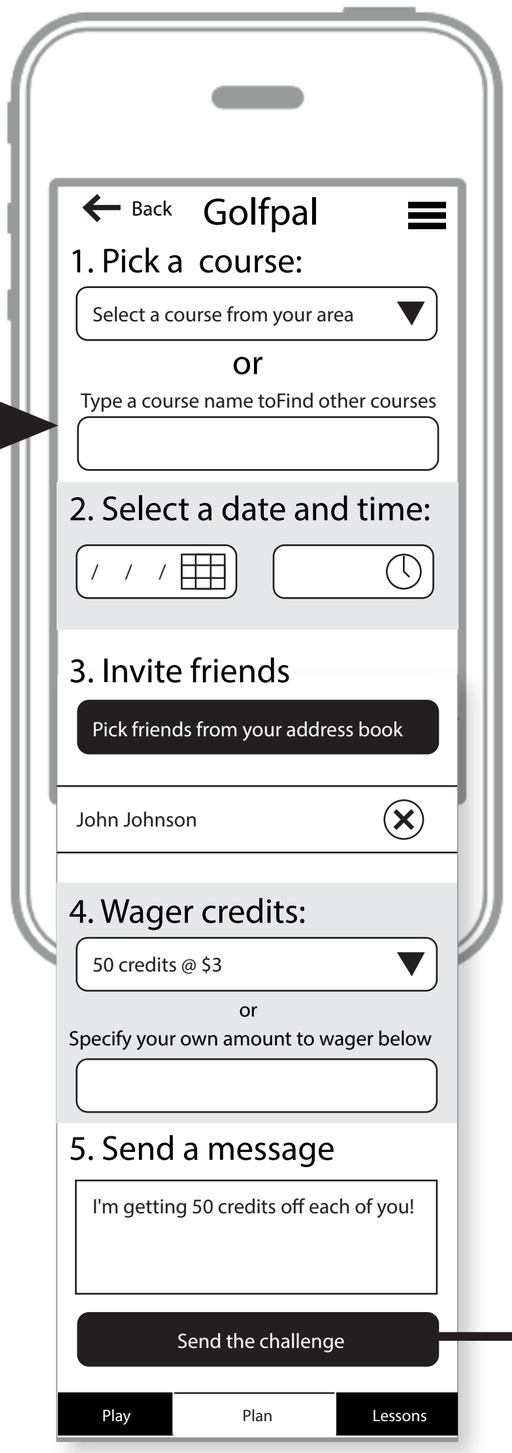

The user can view their individual **score** for the selected round of golf, and share this as well.

Plan Screen

User selects challenge your friends, on the home page of the PLAN screen

Challenge a friend(s)

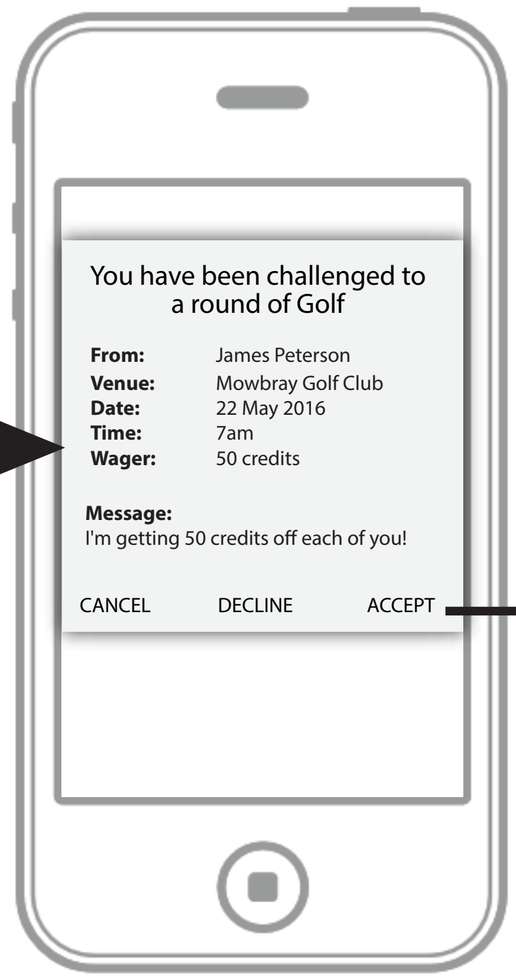

The user has the ability to select a course in their area or find other courses listed in the app.

The user selects a date and time, using the native picker to the device.

The user then selects friends from their contacts list, and has the ability to remove the if by chance they mis-selected or changed their mind.

Note that the "Select date and time", inter-grates into Microsoft Outlook/Exchange, and Google Calendar. Selecting a date, should launch your default device calendar.

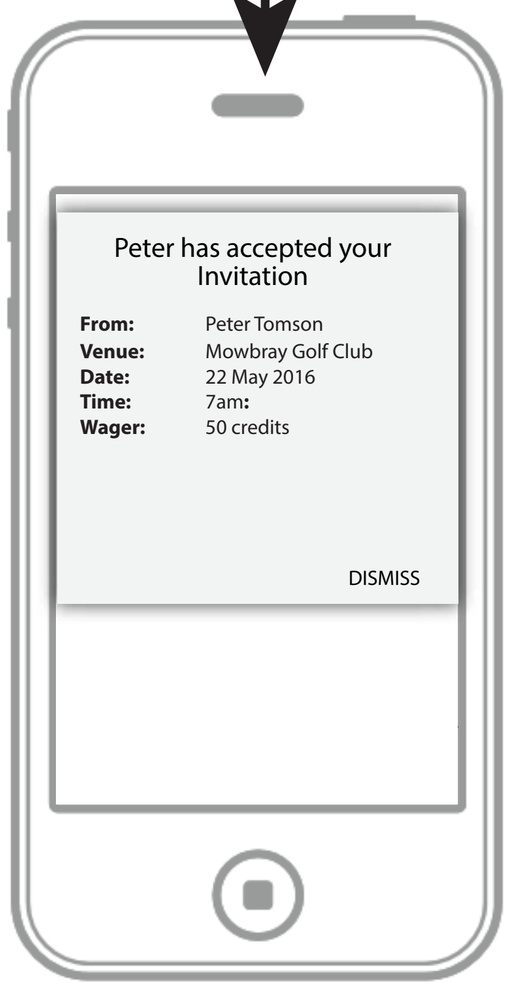

Push notifica

The Challenge is delivered to the invitees via a push notification, and appears on thier GolfPal feed.

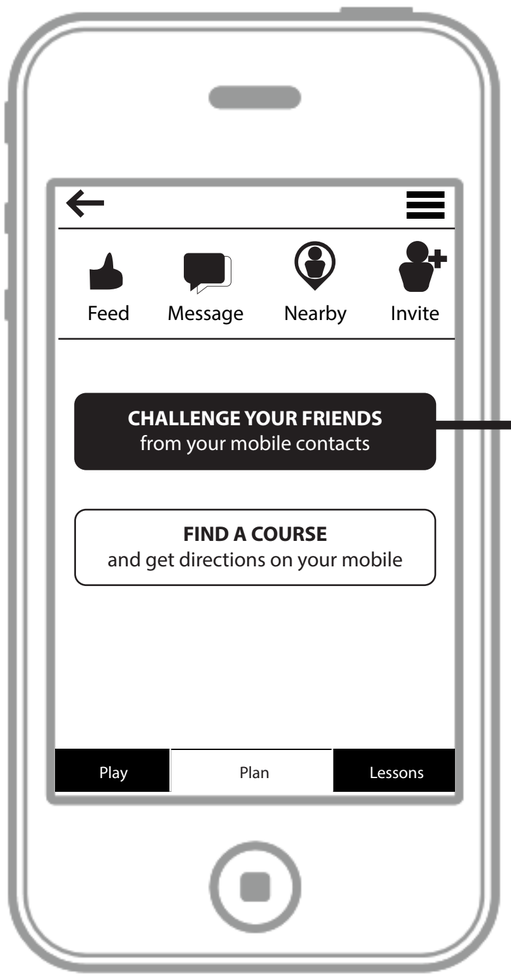

The friends can "Accept" or "Decline" the invitation. Their choice is sent via a push notification back to the challenger.

Push notification

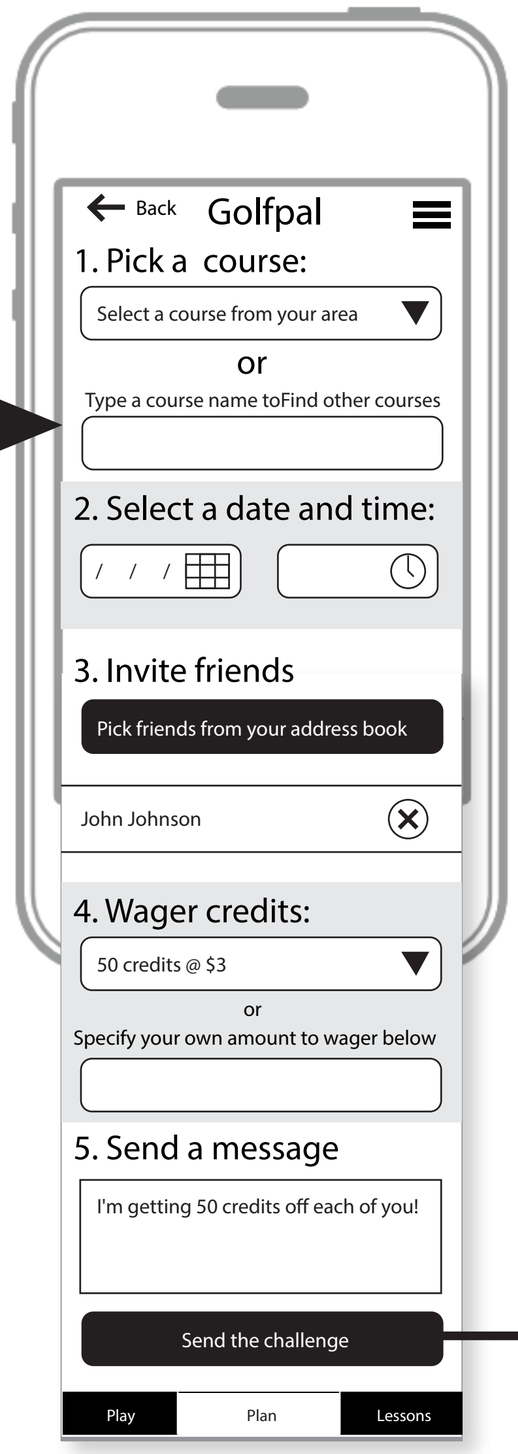

The challenger gets a notification that the invitee, has accepted the challenge.

Plan Challenge friend(s) flow

User selects challenge your friends, on the home page of the PLAN screen

Challenge a friend(s)

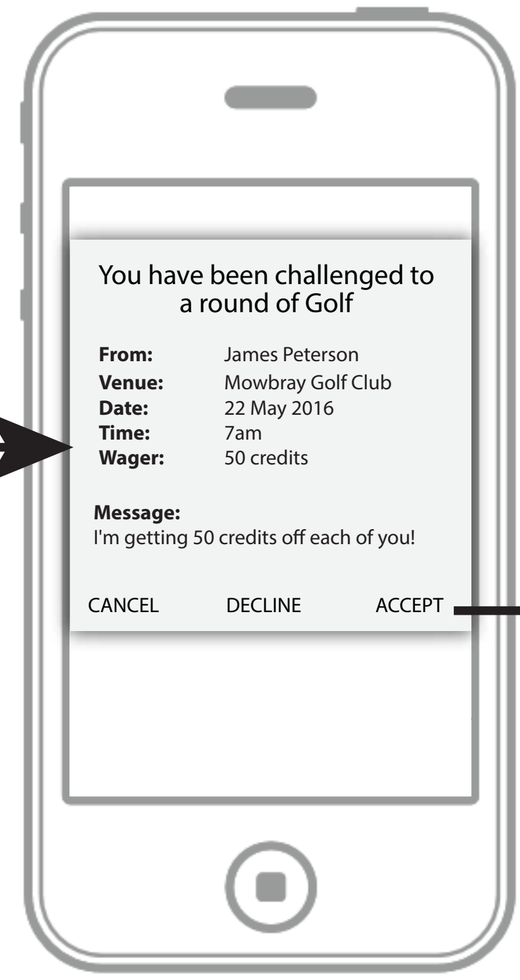

The user has the ability to select a course in their area or find other courses listed in the app.

The user selects a date and time, using the native picker to the device.

The user then selects friends from their contacts list, and has the ability to remove the if by chance they mis-selected or changed their mind.

A discussion point is will the user only be able to message all the friends added at once or should friend added have the ability to get individual messages? This wireframe suggests that all the friends added get the same message.

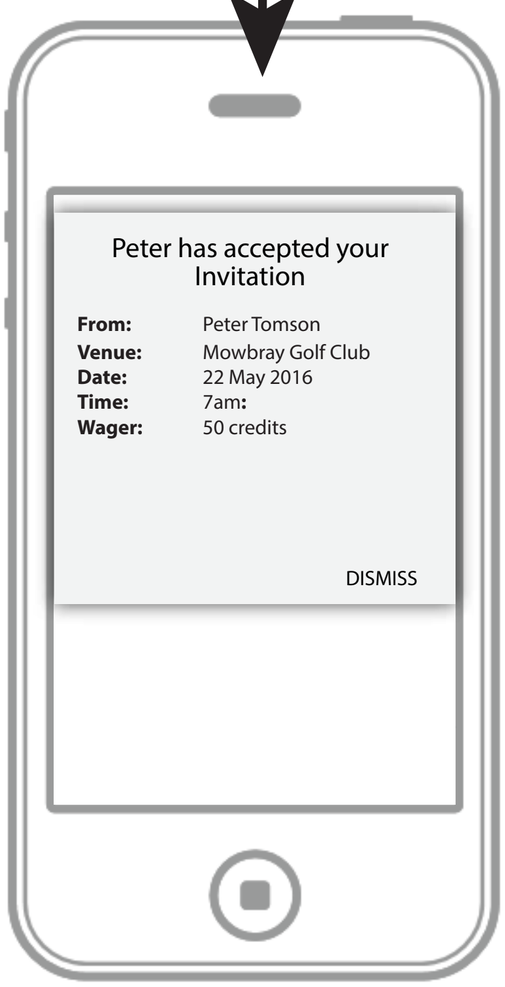

Push notifica

The Challenge is delivered to the invitees via a push notification, and appears on thier GolfPal feed.

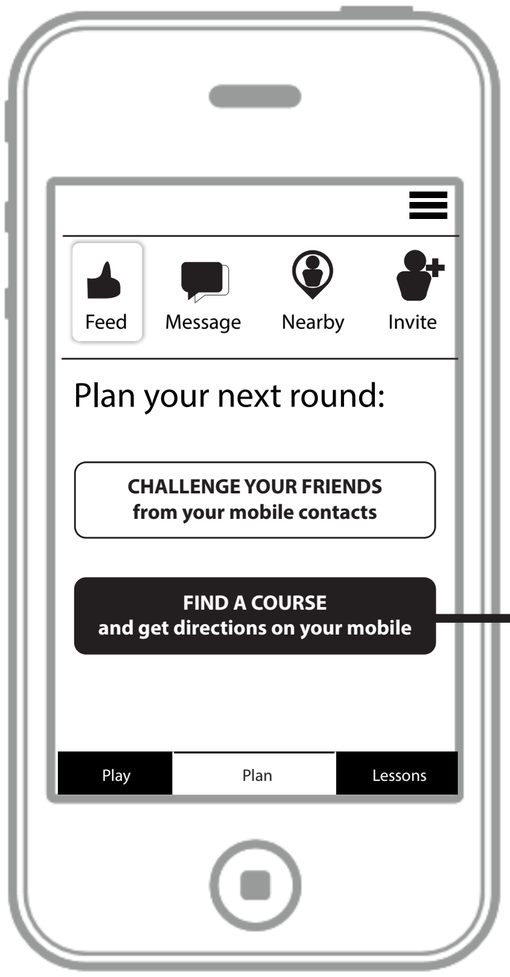

The friends can "Accept" or "Decline" the invitation. Their choice is sent via a push notification back to the challenger.

Push notification

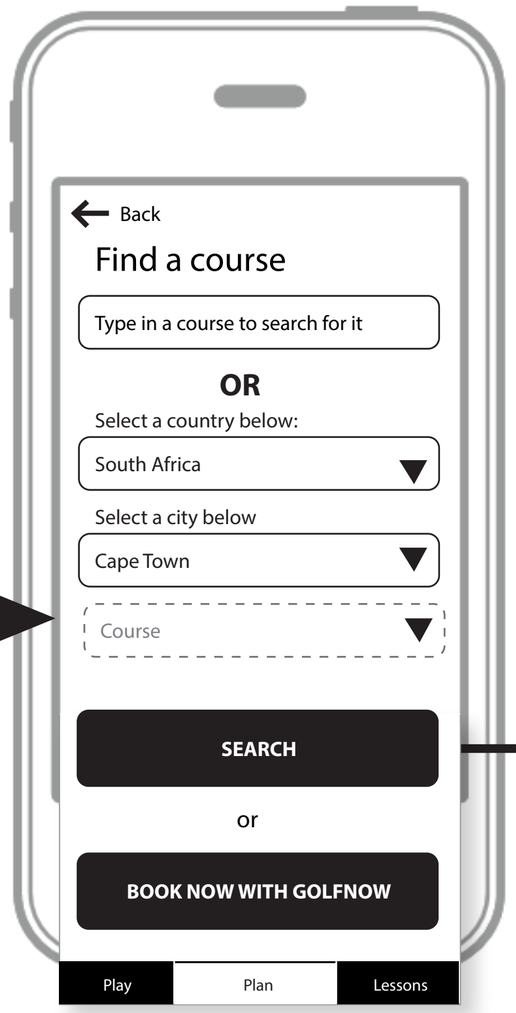

The challenger gets a notification that the invitee, has accepted the challenge.

Find a course / Golf course locator

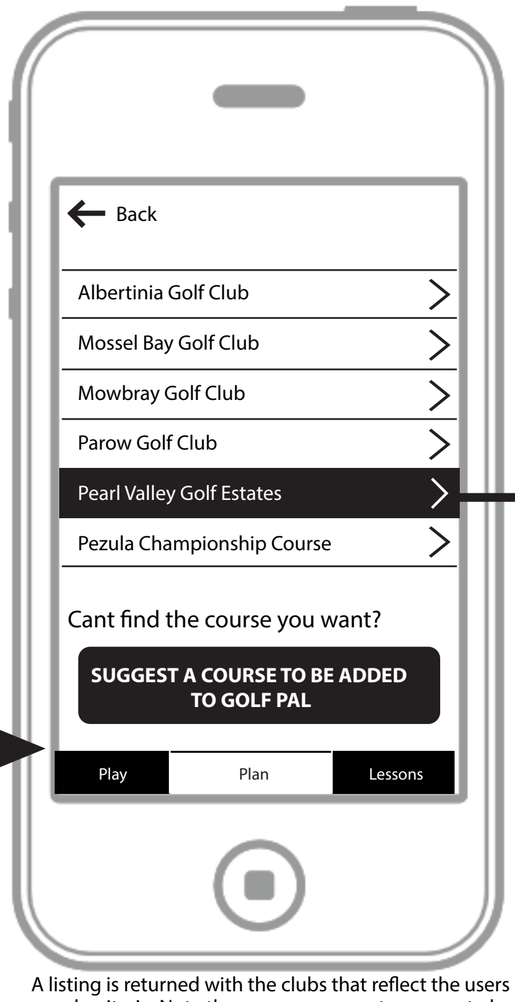

User selects find a course

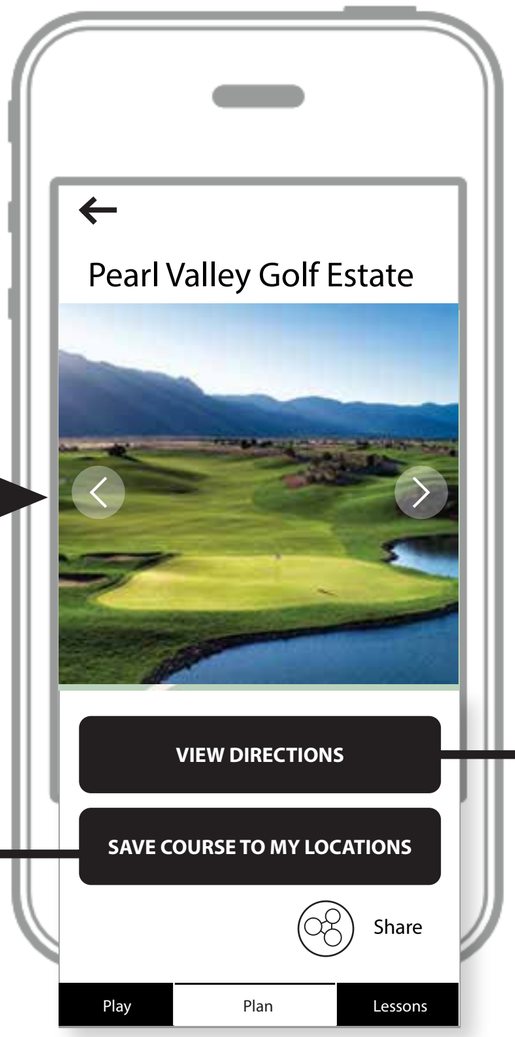

User selects a country, then city, then the Course dropdown appears.

or they can search all listed courses by typing in a Course name.

A listing is returned with the clubs that reflect the users search criteria. Note the user can suggest a course to be added to Golf Pal if the search results dont find the course they want.

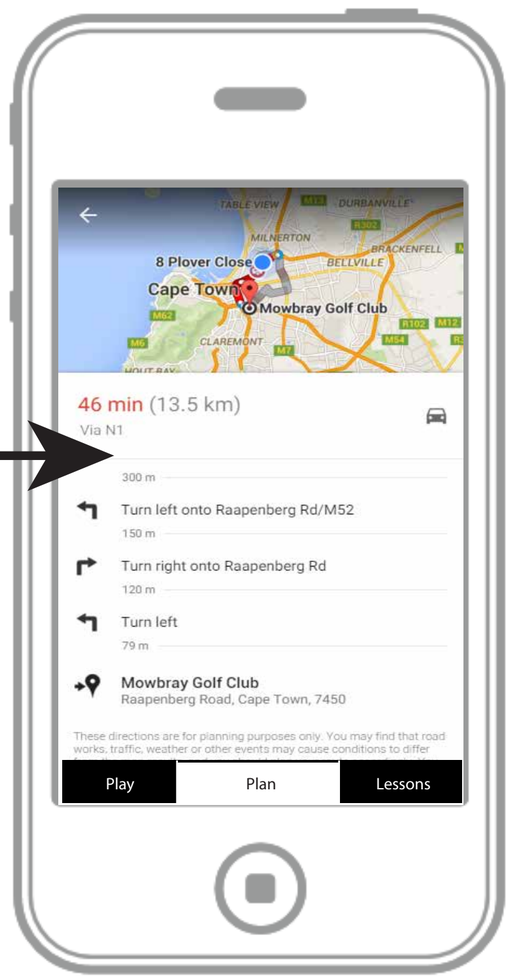

In this scenario the user selects the Pearl Valley Golf club.

A thumb nail of the course is displayed in a carousel. The user can swipe left or right for the next/previous courses from their search criteria

The user can save a course to "My Locations" which will be available through out the app, in a dropdown for easy of user selection. E.g. in the challenge a friend interface the user can select from a prepopulated intelligent dropdown.

Note the user can share this location to their Facebook, Twitter, Instagram or GolfPal timelines.

Get directions

I see this as using the Google maps Directions API. This is dependent on the users having the location setting on their device set to active.

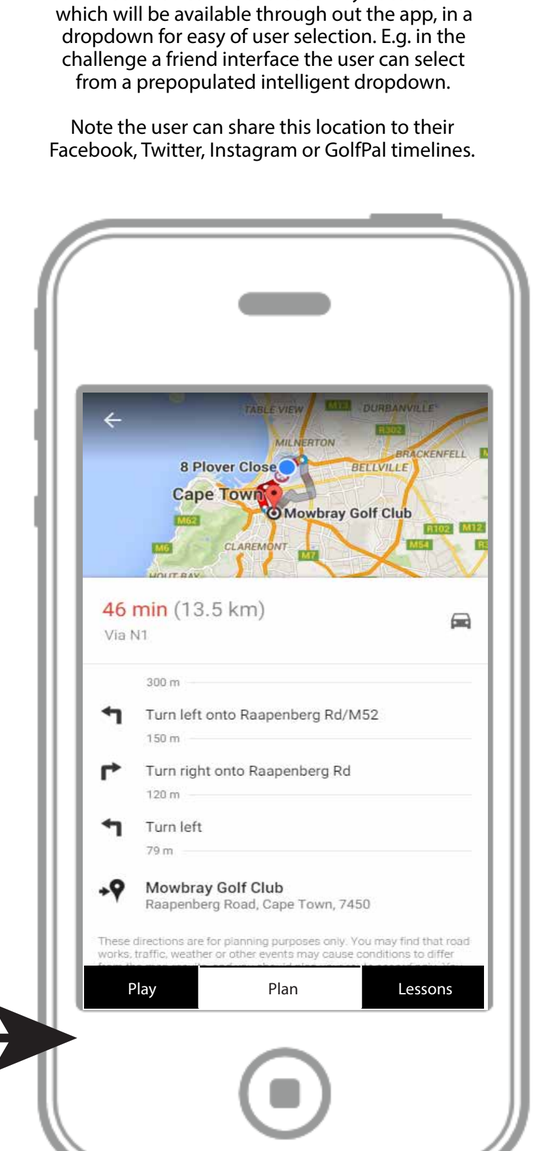

My locations is accessed by going through the hamburger menu.

It stores all courses you have been challenged at or that you have challenged others. Also the course you selected as you home course - Any course that you searched for directions for.

These locations will be populated in a drop-down for easy of user selection anywhere in the app where you need to select a golf course.

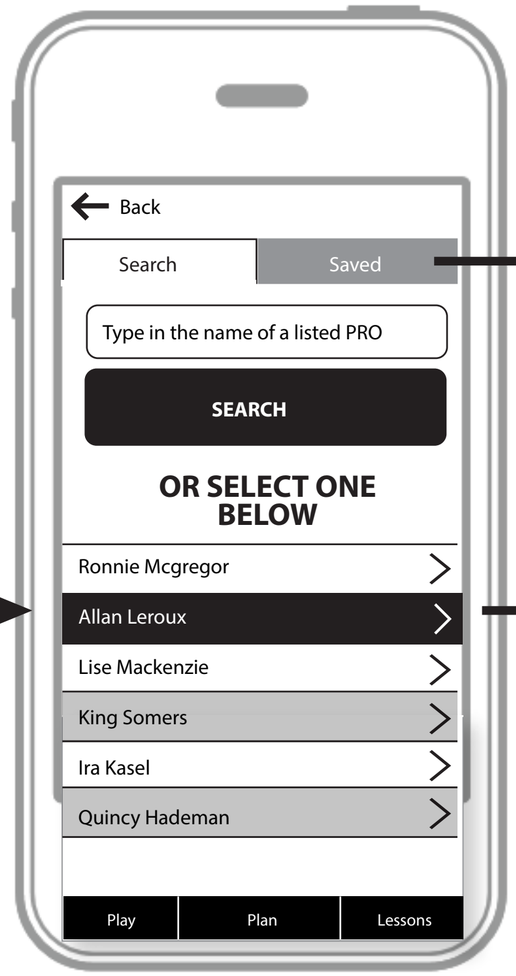

Get help, find a pro and check out Pro's profile

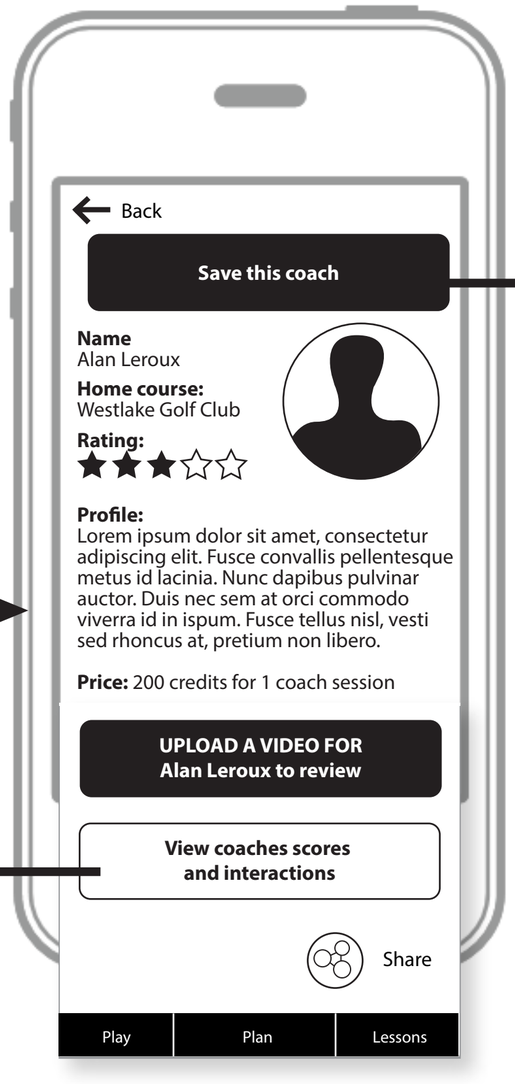

Tapping on the GET HELP button takes you to the Lessons landing page, as it would if you tapped "Coaching" on the floating menu at the bottom.

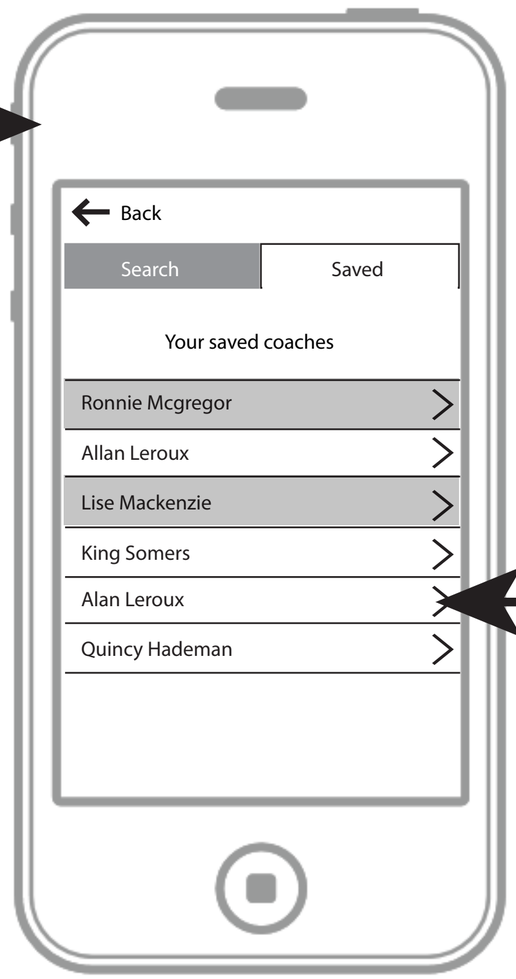

Coach listing screen

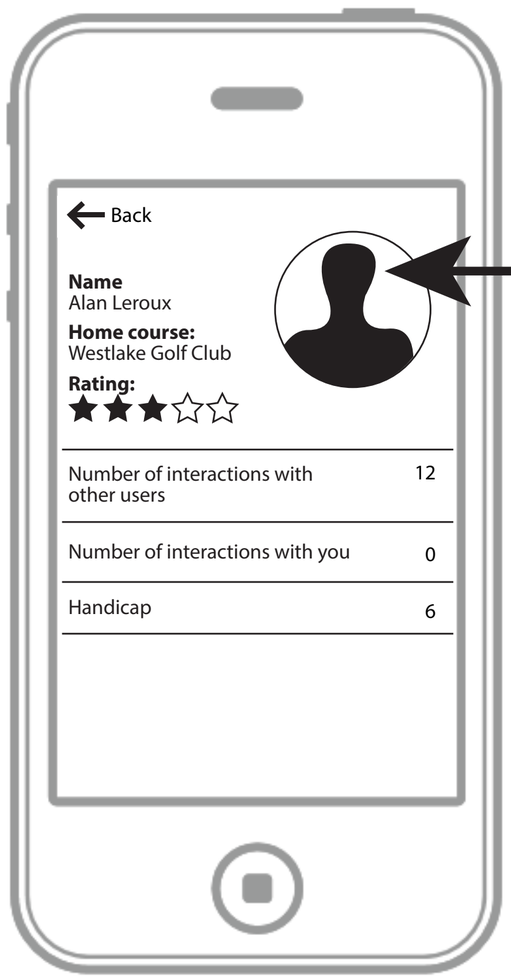

The screen shows listed PRO's, and the user can tap to see the listed PRO's profile. The user can also search for a Pro by name. Note, Pros that are offline will be greyed out and not selectable.

Selecting from the listed coaches, display the selected coaches profile, home course, and rating. the user can at this point choose to upload a video (if they have credits) to get said coach to review and give feedback on their video. The user can also view coach scores and interactions.

If you save a pro, buy tapping the "save this coach" button in the coaches profile, the coach is saved to a list, so the user can "bookmark" them for later use. Greyed out coaches represent that they are offline at the current time

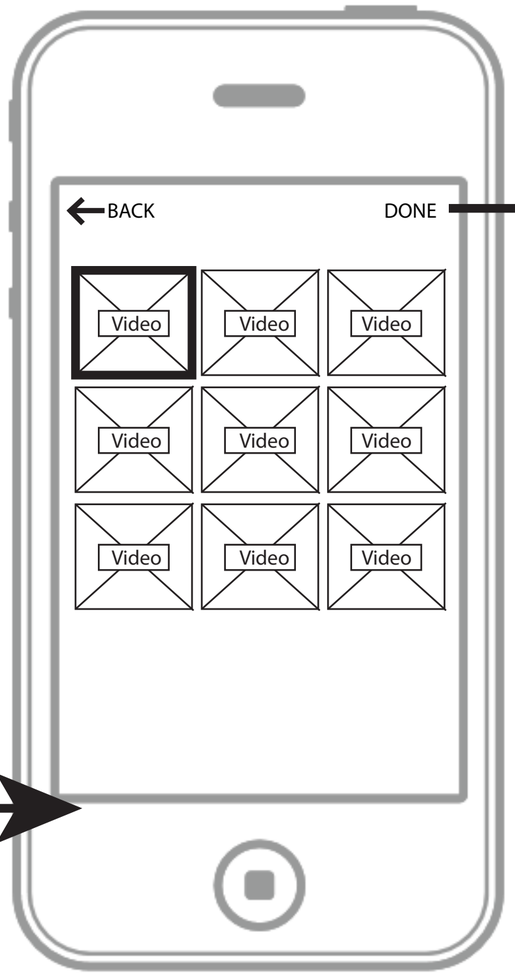

View coach scores and interactions.

Upload video (user has credits)

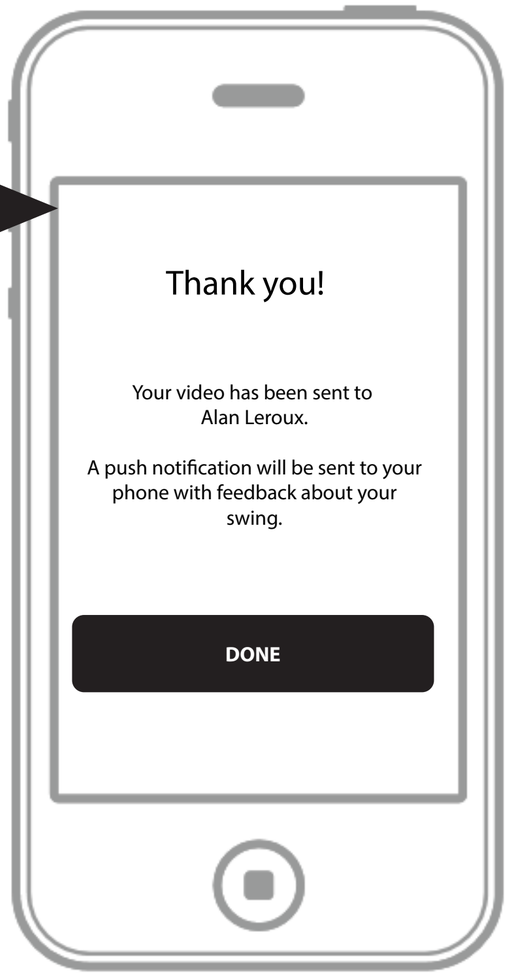

The user taps the "Upload a video for review" button. In this scenario, the user has credit to purchase a pro review.

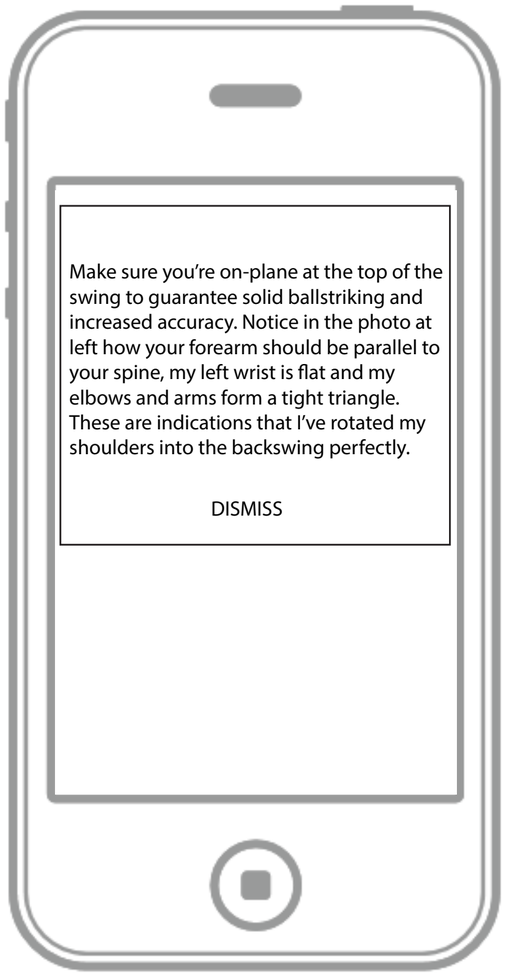

This launches the users native device storage where the user can select a video. The user then selects done.

Note that the user is restricted to upload only an 8 second video for the pro to review.

A notification screen appears to confirm that the swing video has now been sent to the selected pro.

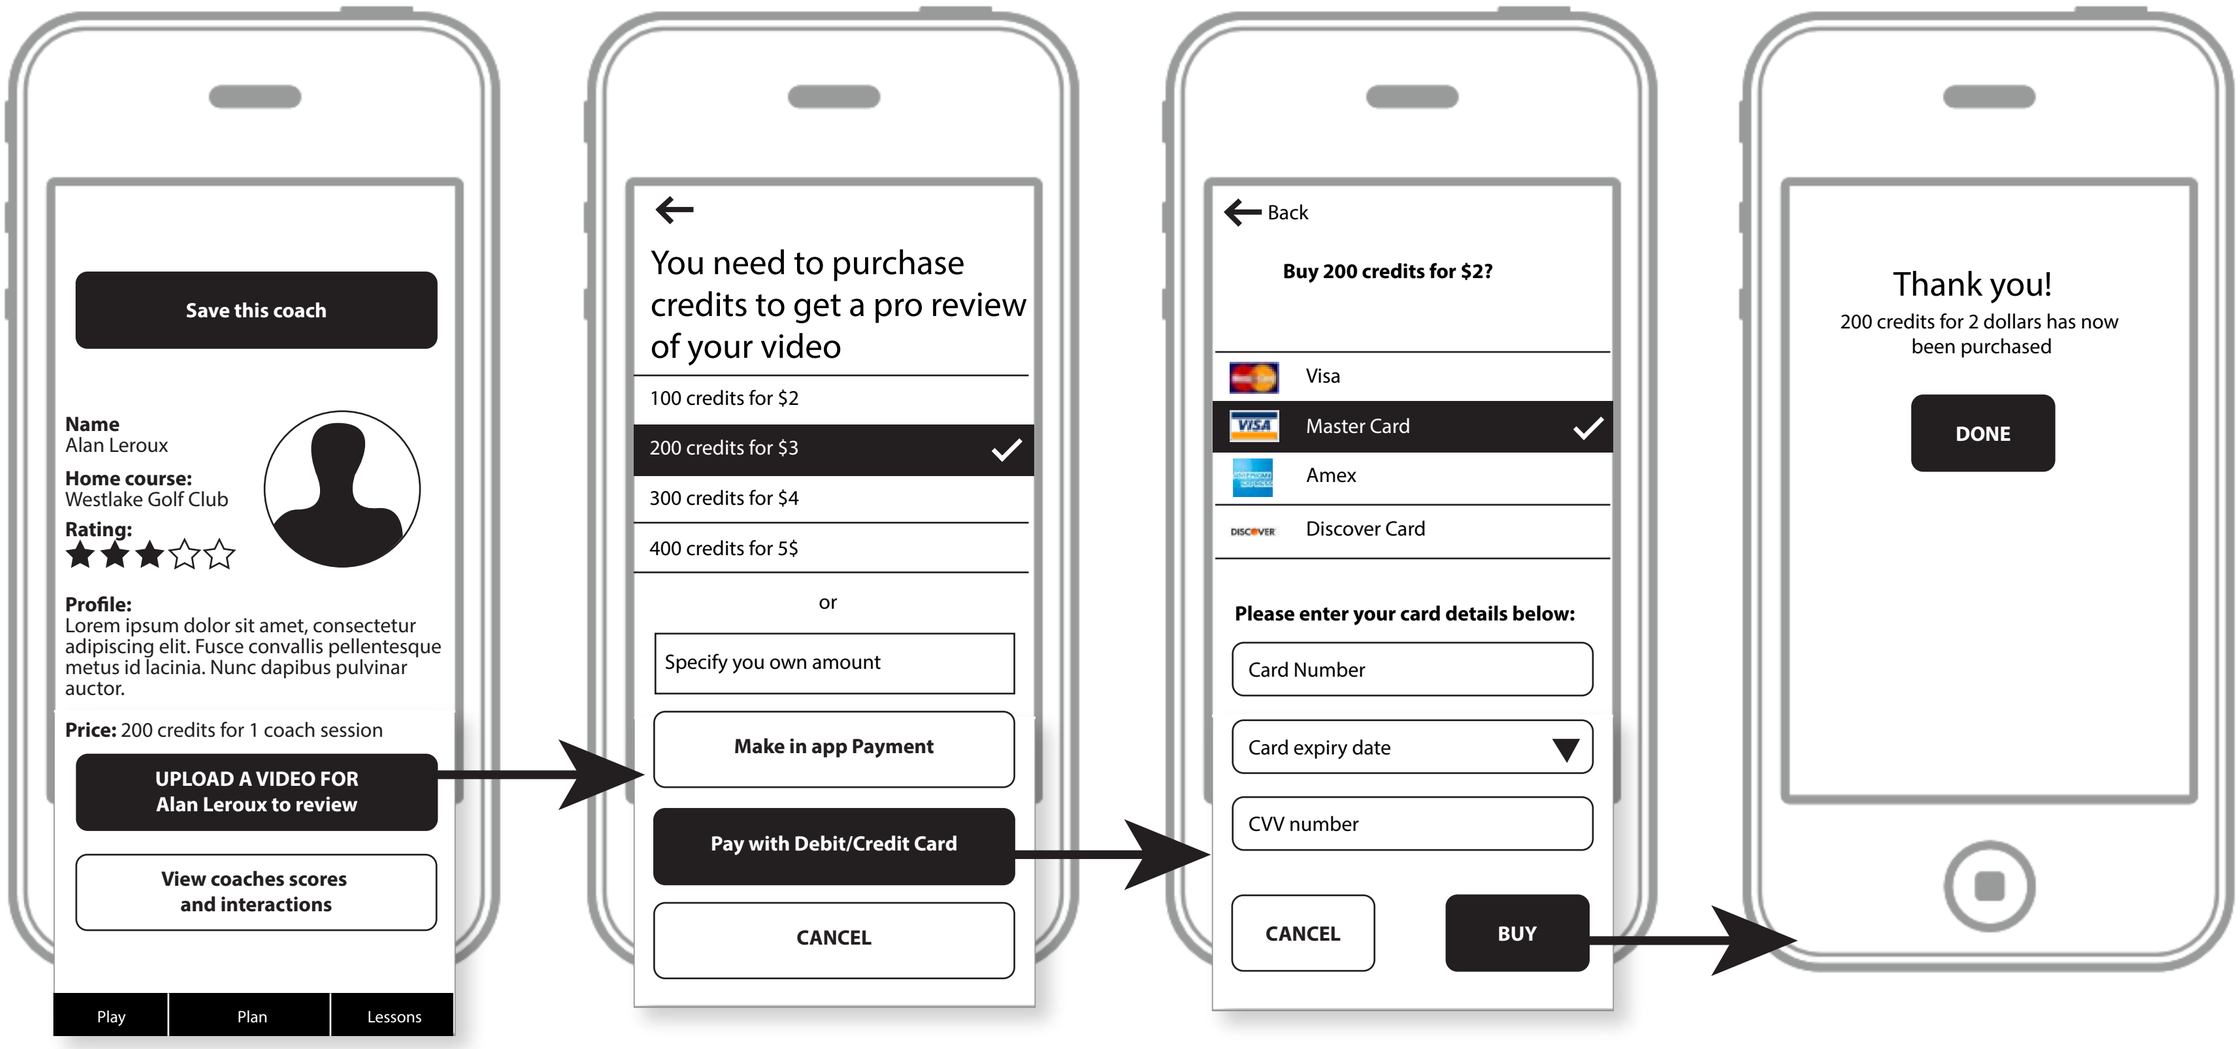

Note the response time of the pro is tracked, and if outside of the SLA, this needs to appear on the back-end report.

Push notification

The golf pro evaluates the swing and sends his feedback within the Golfpal app. The user receives the feedback via a push notification on their device.

Upload video, prompt to get credits, payment with credit/debit card

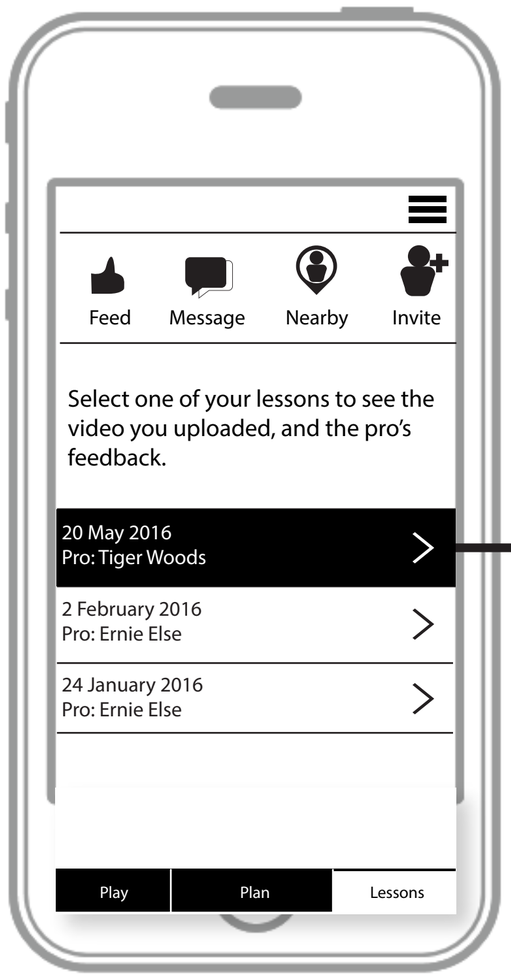

The user taps the "Upload a video ..." button

The user decides to pay with their Debit / credit card

The user selects which card, in this case Master Card. They then input Card number, expiry date (via a native date picker) and the CVV number and hit "BUY".

A notification screen appears confirming their purchase. Tapping done takes the user back to the coach listing screen.

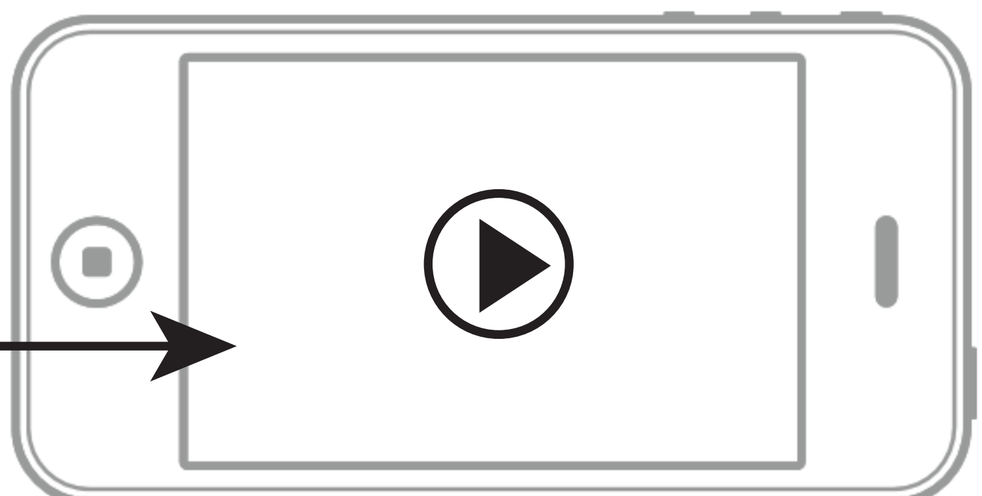

Lessons screen

Lessons Tab
This tab shows the user their PRO reviews history.
With the latest pro review first in the list.
The user taps on it and is taken to the feedback message that the Pro sent.

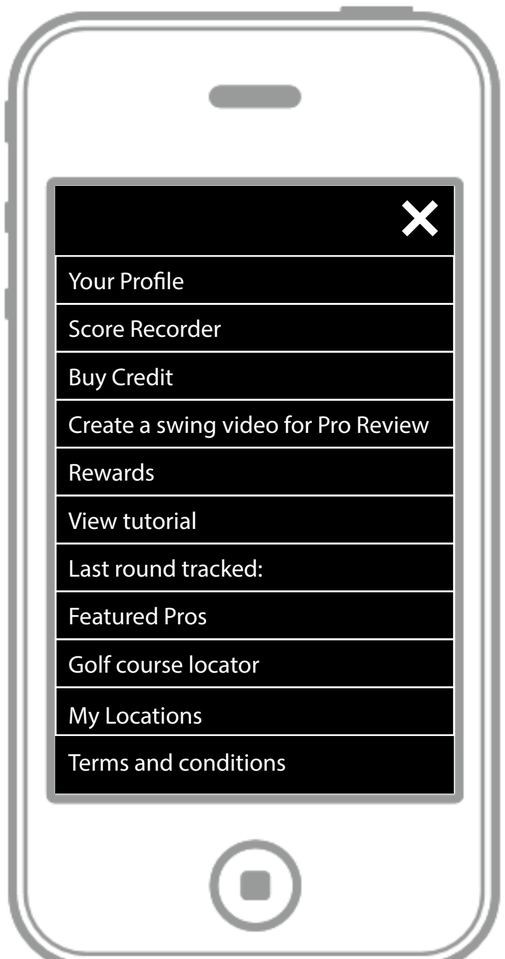

Lessons Tab
The user reads the pro review, and decides to view the swing video associated with this and to give context to the review.

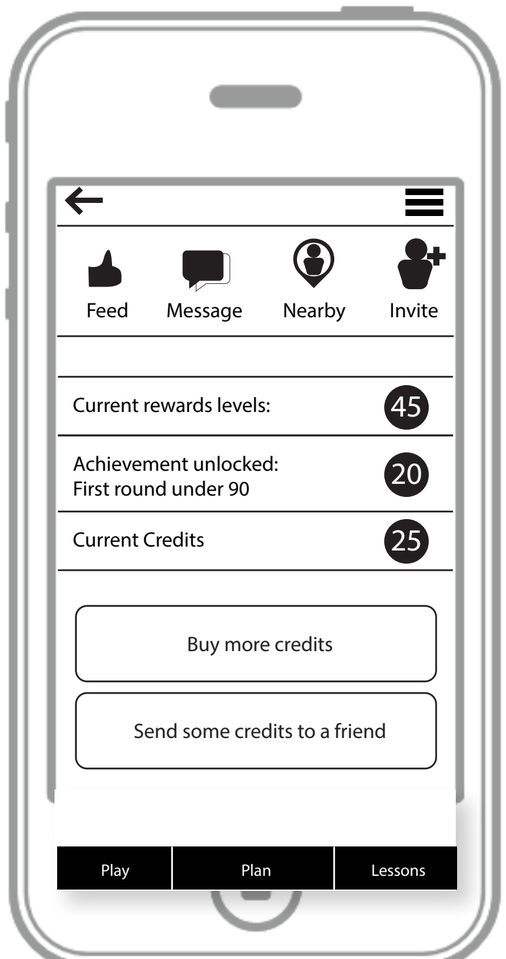

Lessons Tab
The user watches their own video. When the video is done (8 seconds max) the user is routed back to the lessons tab.

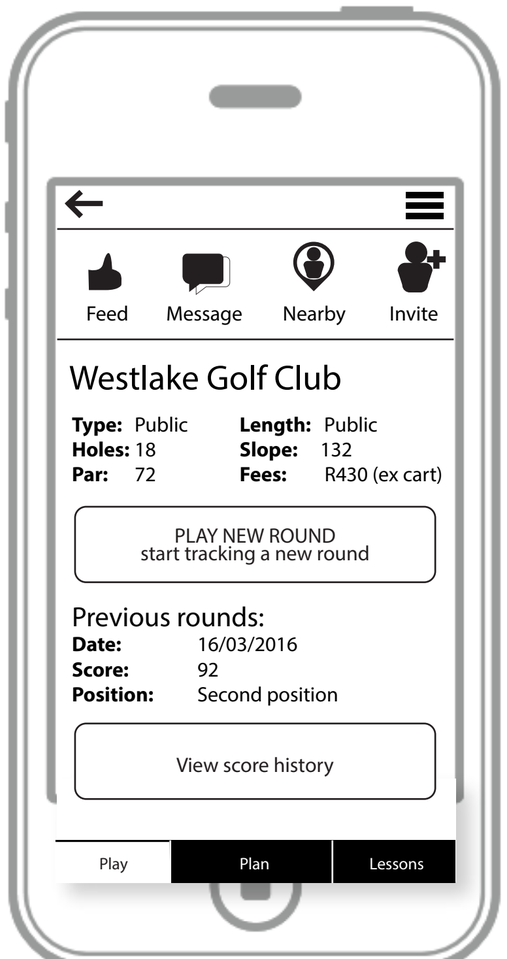

Hamburger menu, Rewards and Play landing screens

Menu (hamburger open)

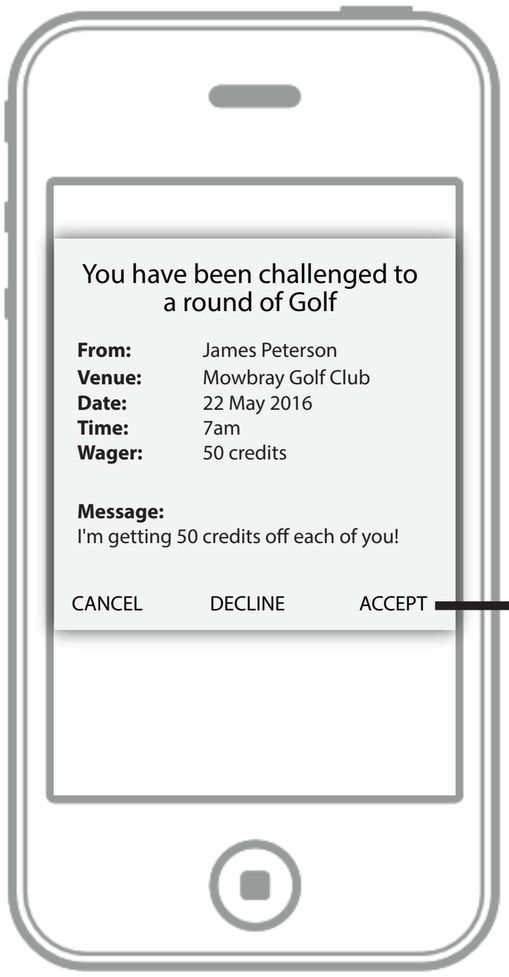

Rewards screen

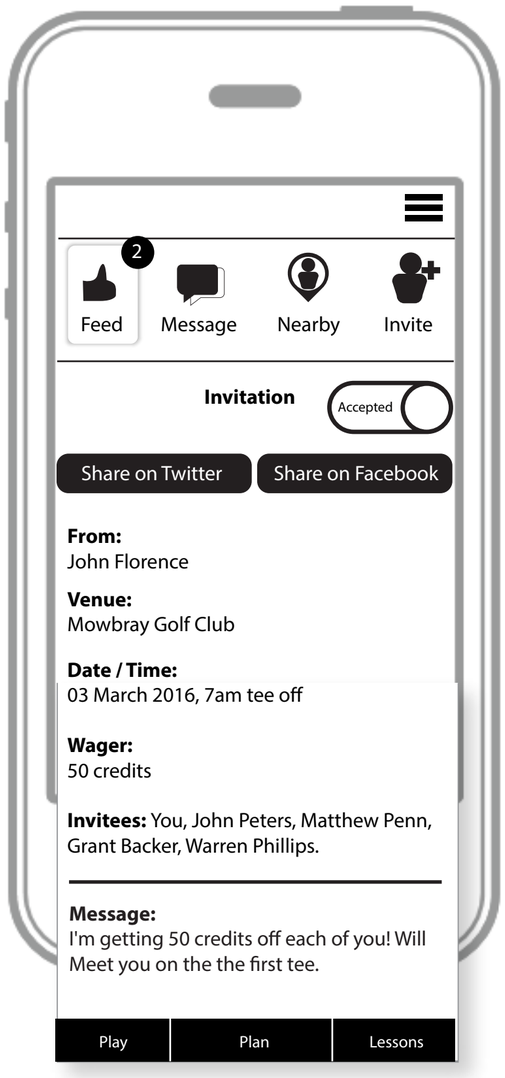

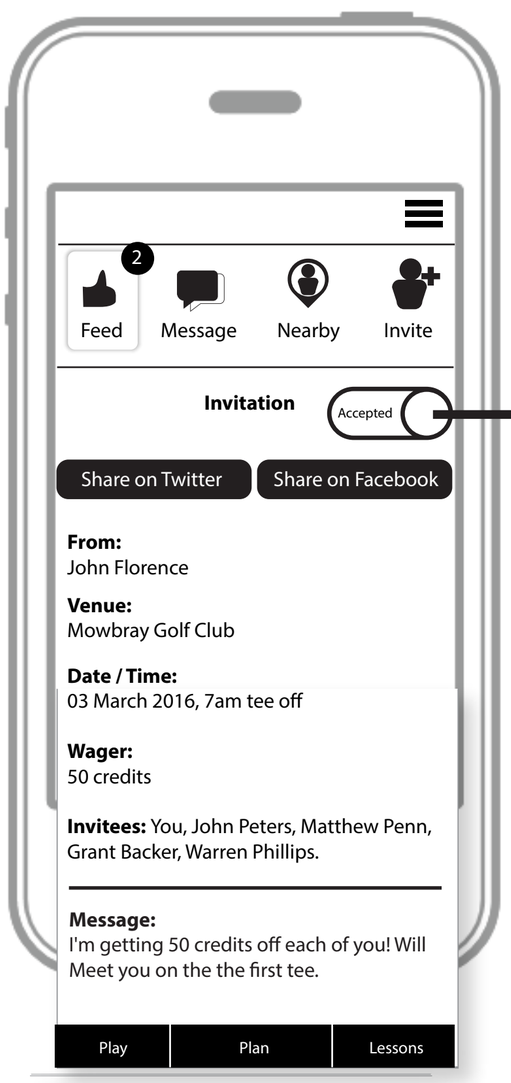

Play landing page

Accepting a challenge

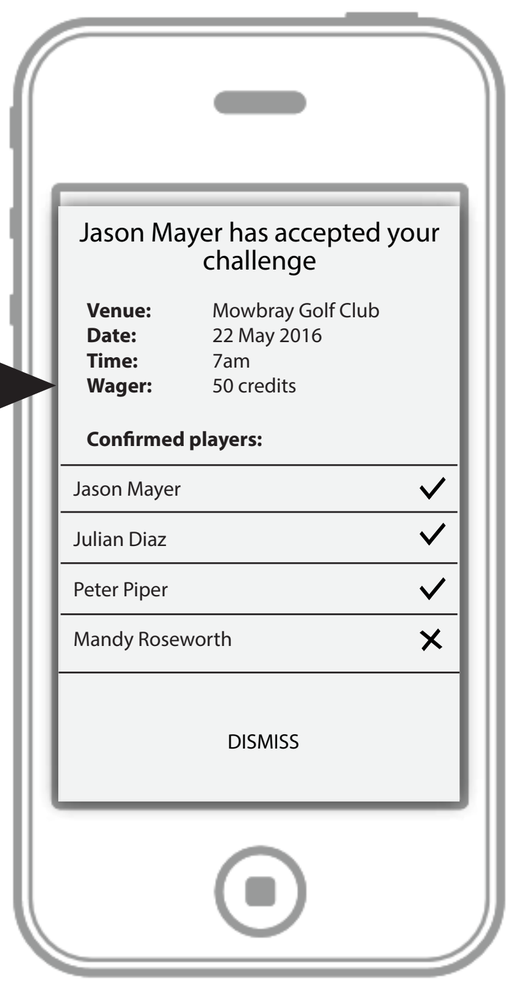

The user who was challenged can either accept the challenge via the push notification (as above, or accept the challenge in app, as in this example.

Push notification to challenger.

The challenger will get a push notification stating you have accepted their challenge.

The Challenger is notified via a push notification that the challenge has been accepted.
